GENERAL ATOMICS
ELECTROMAGNETICS

We'll be on-line for as long as you're on-line

Nuclear power plants worldwide rely on the quality and dependability of General Atomics' full range of qualified radiation monitoring systems. For nearly 50 years, we've fielded and continuously supported monitoring and detection systems that provide plant operators with the reliability they need to keep maintenance and operating costs low. Our radiation monitoring systems are currently being integrated into new plant builds and are used to retrofit existing plant installations.

Designed and manufactured in the U.S.A., our products remain unmatched in meeting safety and non-safety requirements. We also provide unparalleled customer support and obsolescence mitigation to ensure each system continues to operate efficiently and reliably for a plant's entire operating lifecycle.

We make radiation monitoring systems for a lifetime of service. Contact us today.
