VP, Contracts & Services
North America
Fuel Commercial &
Customer Center

Together, writing stories of success.

Nuclear plant operators are constantly seeking ways to run their plants more safely and efficiently, and fuel is no exception. Our fuel experts have tackled these needs through PROtect — our enhanced accident tolerant fuel (EATF) program.

We worked overtime to accelerate our research and development providing customers with the next evolution of nuclear fuel designs ahead of schedule. PROtect EATF features combined with GAIA, our most advanced pressurized water reactor fuel design, increase coping time, safety and efficiency for today's nuclear fleet.
