

“We help reduce regulatory burden to extend operating life of plants while keeping you within the safety requirements.”

— Tony Robinson, P.E.
Senior Vice President,
Products and Engineering

Together, writing stories of success.

Most plants are under tremendous pressure to reduce their O&M budget. Recently, a plant brought Framatome in to implement a 10 CFR 50.69 program to re-categorize equipment in five systems based on the risk/safety significance.

Our innovative experts were able to move 90% of the safety-related equipment to a low safety significance category. This increased the plant's focus on critical safety equipment while reducing their O&M costs through increased reliability, availability and reduced outage times.
