

# Staying power

## More than 60 years of commercial nuclear power experience

The nuclear power industry demands a highly specialized, diverse skillset and knowledge base.

As the engineer and/or constructor of more than 39,000 megawatts, we provide support for new nuclear technologies, the emerging small modular reactor market, operating plant technical services including major component replacements, and facilities that support the nuclear fuel cycle. We also have expertise helping nuclear power plant owners take aging or noncompetitive plants offline safely and efficiently.

Our success in the decommissioning and demolition market was just one of the reasons Southern California Edison selected an AECOM joint venture as the decommissioning and demolition contractor for the **San Onofre Generating Station (SONGS) project** — one of the **largest commercial nuclear plant decommissioning** projects in the United States.
