

SCHOTT ETERNALOC®

# Save and Be Safe.

What is the value of peace of mind? SCHOTT Eternaloc® Nuclear Electrical Penetration Assemblies can help you discover it. Using SCHOTT's established glass-to-metal sealing technology, Eternaloc® Assemblies enable safe transmission of electricity and data signals through the gas-tight containment walls of nuclear power plants. These proven components last decades longer than polymer-based counterparts in safety-critical positions and can help you "fit and forget" with a 60-year lifetime that eliminates decades of maintenance and replacement costs.

**What's your next milestone?**
