

CHAMPS Analytics helps you improve Online and Outage performance

Improve Work Management with CHAMPS Online Analytics

Transfer your work management data into powerful analytics to maximize your Online work schedule and stay on top of AP-928 Metrics. There's no more need to run those old fashioned reports.

Palo Verde Nuclear Station currently uses this visual and easy to use system to do the following:

- Highlight the most important work that needs to be completed
- Make better decisions on how to schedule work and manage scope
- Drill down to work order level details
- Improve your resource management to maximize completing work based on available hours
- See all work scheduled into the future
- Easily identify work orders that can be bundled together
- Quickly analyze materials and labor costs
- Improve your INPO rating

Reduce Outage Time and Increase Efficiencies with CHAMPS TaskView™

Gain real-time visual displays of shutdown/turnaround/outage (STO) work assignment schedules with CHAMPS TaskView. Define and control data displays for task start/end dates, durations, criticality and more – even how the data should be sorted, auto-scrolled and displayed. Real-time information is provided from a single source allowing you instant status views that can be acted upon immediately.

- Reduce outage durations to save millions of dollars
- Minimize the impact of delays and eliminate conflicts
- Instantly see detailed work assignments and planned maintenance data from your dashboard
- Eliminate bottlenecks to get work done on schedule
- Gain assurance by completing outages on time and within compliance mandates
- Synch resources for optimal performance
