***EXCITING NEWS FROM
PAJARITO SCIENTIFIC CORPORATION***

Radiation Protection Systems, Inc. (RPS) www.radprosys.com is becoming Pajarito Scientific Corporation (PSC) www.pajaritoscientific.com. RPS (located in Groton, Connecticut) has been the premiere supplier of Ventilation, Shielding and Containment products, including custom-design and fabrication, since 1978. Under the PSC brand, we will continue to supply high-quality products and services to the US Department of Energy (DOE), Department of Defense (DOD), Pharmaceutical, and commercial-nuclear-power markets worldwide.

PSC is a "Best-In-Class" Radiometric Systems and Services Solutions Company, which also provides custom-design and fabrication. PSC's core expertise is in the location, identification, and characterization of radioactive materials. We support the decommissioning of DOE facilities throughout the United States, and also facilities in Canada, and the UK.

Together, our companies offer a more-diversified portfolio; one which has been protecting workers and providing safe handling, transportation, and long-term storage of hazardous material for nearly 40 years. Our client list includes every U.S. and Canadian commercial nuclear utility, every major DOE facility, many DOD facilities, the Center for Disease Control (CDC), as well as universities, pharmaceutical & biopharma research facilities, and manufacturing companies. Our roots are deeply implanted in both Government and civilian nuclear programs, commencing with the development of nuclear programs dating back to the 1950's.

PSC pledges to continue providing the high-quality equipment and unparalleled services you have come to expect over the past four decades. We are proud to add the RPS brand to our corporate-family marque.
