

General Subject Index

Volume 181: September, October, November 2015

2-D/1-D fusion method, 1

A

Aerosols, 137, 318
All cross sections, 272
Anderson acceleration, 342
Area ratio method, 361
Attribution, 82

B

Bell-Glasstone spatial
correction factor, 361
Bias, 17
Boltzmann equations, 342
BRAHMMA, 361
Burnup credit, 105
Burst reactor, 96

C

Calcination, 310
CFBR-II, 96
Coagulation, 137
Cobalt buildup, 175
Coefficients of reactivity, 82
Computation, 137
Condensation, 318
Control rod, 204
Consistency, 60
Convergence analysis, 331
Co-sol-gel process, 216
Criticality, 105
safety, 17
Cross-correlation measurement, 72
Cross sections, 302

E

Energy group structures, 302
Energy spectra and angular distributions,
272

F

Fast neutrons
counting, 225
Fast reactor, 204
Fission products, 318
Feedback, 82
Fixed-point iteration, 331

G

Gamma irradiation
high dose, 191
Gamma ray counting, 225
Gibbs free energy, 175

H

Homogenization, 204
Hybrid Monte Carlo–deterministic
techniques, 48

I

Iodine adsorption, 310
ITER, 48

K

k -eigenvalue problem, 351

L

Latin hypercube sampling, 160

M

Magnesia (MgO), 310
Matrix nearness problem, 60
Microfluidic, 216
Minor actinide-bearing nuclear fuel, 216
Moment-based acceleration, 351
Monte Carlo, 72

N

Neutron initiation probability, 96
Neutron transport, 342
Neutronics, 48
Nonlinear diffusion acceleration, 351
Nonoverlapping local/global iteration, 1
Nuclear data, 60
Nuclear models theory, 272

O

Oxide film, 175
Oxidation behavior of iodide ion, 191

P

p-CMFD methodology, 1
Persistent fission chain, 96
pH change, 191
Prompt emission in fission, 289
Prompt neutron multiplicity, 289
Prompt supercritical, 96
Pulsed neutrons, 96
PWR UOX, 105

R

Radiation shielding, 48
Radiological sources, 302
Random sampling, 160
Response matrix method, 331

T

Time evolving fission chain theory, 225

U

Uncertainty quantification, 160

V

Validation, 17
Variance reduction, 72
