## **American National Standard**

Designation of this document as an American National Standard attests that the principles of openness and due process have been followed in the approval procedure and that a consensus of those directly and materially affected by the standard has been achieved.

This standard was developed under the procedures of the Standards Committee of the American Nuclear Society; these procedures are accredited by the American National Standards Institute, Inc., as meeting the criteria for American National Standards. The consensus committee that approved the standard was balanced to ensure that competent, concerned, and varied interests have had an opportunity to participate.

An American National Standard is intended to aid industry, consumers, governmental agencies, and general interest groups. Its use is entirely voluntary. The existence of an American National Standard, in and of itself, does not preclude anyone from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard.

By publication of this standard, the American Nuclear Society does not insure anyone utilizing the standard against liability allegedly arising from or after its use. The content of this standard reflects acceptable practice at the time of its approval and publication. Changes, if any, occurring through developments in the state of the art, may be considered at the time that the standard is subjected to periodic review. It may be reaffirmed, revised, or withdrawn at any time in accordance with established procedures. Users of this standard are cautioned to determine the validity of copies in their possession and to establish that they are of the latest issue.

The American Nuclear Society accepts no responsibility for interpretations of this standard made by any individual or by any ad hoc group of individuals. Responses to inquiries about requirements, recommendations, and/or permissive statements (i.e., “shall,” “should,” and “may,” respectively) should be sent to the Standards Department at Society Headquarters. Action will be taken to provide appropriate response in accordance with established procedures that ensure consensus.

Comments on this standard are encouraged and should be sent to Society Headquarters.

## **Inquiry Requests**

The American Nuclear Society (ANS) Standards Committee will provide responses to inquiries about requirements, recommendations, and/or permissive statements (i.e., “shall,” “should,” and/or “may,” respectively) in American National Standards that are developed and approved by ANS. Responses to inquiries will be provided according to the Policy Manual for the ANS Standards Committee. Nonrelevant inquiries or those concerning unrelated subjects will be returned with appropriate explanation. ANS does not develop case interpretations of requirements in a standard that are applicable to a specific design, operation, facility, or other unique situation only, and therefore is not intended for generic application.

Responses to inquiries on standards are published in ANS’s magazine, *Nuclear News*, and are available publicly on the ANS Web site or by contacting the ANS standards administrator.

## **Inquiry Format**

Inquiry requests must include the following:

- (1) the name, company name if applicable, mailing address, and telephone number of the inquirer;
- (2) reference to the applicable standard edition, section, paragraph, figure and/or table;
- (3) the purposes of the inquiry;
- (4) the inquiry stated in a clear, concise manner;
- (5) a proposed reply, if the inquirer is in a position to offer one.

Inquiries should be addressed to:

**Foreword** (This Foreword is not a part of American National Standard “Group-Averaged Neutron and Gamma-Ray Cross Sections for Radiation Protection and Shielding Calculations for Nuclear Power Plants,” ANSI/ANS-6.1.2-2013.)

A need for computer-readable standard reference neutron and gamma-ray cross-section data was identified by American Nuclear Society Standards Subcommittee ANS-6 in 1975. These cross sections are required for materials and energy ranges of importance in radiation protection and shielding calculations for nuclear power plants. It was observed at that time that data sets that did not meet desired standards of documentation and verification were nonetheless becoming de facto standards.

This standard provides guidance in the preparation and verification of neutron and gamma-ray cross-section sets and identifies several sets of standard reference data that meet the procedures specified herein. The identification of standard neutron and gamma-ray data is expected to improve the efficiency of shielding and radiation protection computations by reducing redundant verification and processing operations by each user. In addition, shielding computations are expected to become more accurate as a result of effort having been focused on the development and testing of nuclear data to be used as a standard. A coupled neutron-gamma multigroup cross-section set, referred to as BUGLE, was developed and tested for this purpose. A revised data set, BUGLE-80, was developed in 1980 on the basis of the BUGLE test results, and the BUGLE-80 data set was recommended for shielding and radiation protection calculations in ANSI/ANS-6.1.2-1983. A more detailed coupled neutron-gamma multigroup data set, VITAMIN-C, also was identified as meeting the requirements of ANSI/ANS-6.1.2-1983. The SAILOR broad-group averaged data set was added in ANSI/ANS-6.1.2-1989 as another recommended data set.

ANSI/ANS-6.1.2-1999 cited the BUGLE-96 broad-group cross-section library as the recommended set, replacing both the BUGLE-80 and the SAILOR sets. The more detailed VITAMIN-B6 set was also cited as a replacement for the VITAMIN-C set. Both multigroup cross-section sets were based on the most recent version of the evaluated point cross-section library available at the time the standard was prepared, i.e., ENDF/B-VI, Release 3. ENDF/B-VI contained numerous significant changes to nuclear data relative to earlier versions of ENDF/B. Improved experimental data and model predictions are included, and several format changes were made to provide for better representation of the underlying physics and the extension to higher energies.

The present edition of this standard cites the BUGLE-B7 broad-group cross-section library, which is an update of the BUGLE-96 library, and the corresponding fine-group cross-section library VITAMIN-B7, which is an update of the VITAMIN-B6 library, as good examples of data sets for use in radiation protection and shielding calculations. Both VITAMIN-B7 and BUGLE-B7 are based on ENDF/B-VII, Release 0. This edition of the standard also recommends generating problem-specific libraries if the group structure of the broad-group cross-section library BUGLE-B7 will not provide results with sufficient accuracy. An example of where this recommendation should be applied is for cases where thermal neutrons play an important role in calculations.

This standard is related to ANSI/ANS-19.1-2002 (R2011), “Nuclear Data Sets for Reactor Design Calculations.” The scope of that standard includes data of importance for reactor core design, while ANS-6.1.2 covers radiation transport and shielding applications, especially for nuclear power plants. This standard is also related to ANSI/ANS-19.3-2011, “Steady-State Neutronics Methods for Power Reactor Analysis.”

This standard is intended to prescribe recommended practices. The data sets identified are those a novice may use with some confidence and should be seriously considered by the expert. In cases where experts select to use other data sets, they would be expected to have strong reasons why the reference data sets provided herein were not used.

This revision references documents and other standards that may have been superseded or withdrawn at the time this standard is applied. A statement has been included in the references section that provides guidance on the use of references.

This standard does not incorporate the concepts of generating risk-informed insights, performance-based requirements, or a graded approach to quality assurance. The user is advised that one or more of these techniques could enhance the application of this standard.

The membership of Working Group ANS-6.1.2 at the time of the preparation and approval of this revision of the standard included the following:

F. A. Alpan (Chair), *Westinghouse Electric Company*

J. M. Adams, *Corvus Integration, Inc.*  
S. L. Anderson, *Westinghouse Electric Company*  
J. F. Carew, *Brookhaven National Laboratory*  
J. L. Francois, *Universidad Nacional Autonoma de Mexico*  
P. J. Griffin, *Sandia National Laboratories*  
A. Haghghat, *Virginia Tech*  
R. C. Little, *Los Alamos National Laboratory*  
Y. Orechwa, *U.S. Nuclear Regulatory Commission*  
J. C. Ryman, *Individual*  
M. L. Williams, *Oak Ridge National Laboratory*

Subcommittee ANS-6, Radiation Protection and Shielding, had the following membership at the time of its approval of this standard:

C. E. Sanders (Chair), *University of Nevada, Las Vegas/Sanders Engineering*

F. A. Alpan, *Westinghouse Electric Company*  
R. Amato, *Individual*  
P. Bergstrom, *National Institute of Standards and Technology*  
R. Faw, *Individual*  
N. Hertel, *Georgia Institute of Technology*  
S. J. Nathan, *Savannah River Nuclear Solutions*  
J. C. Ryman, *Individual*  
A. A. Simpkins, *Dade Moeller & Associates*  
M. Westfall, *Oak Ridge National Laboratory*

Consensus Committee N17, Research Reactors, Reactor Physics, Radiation Shielding, and Computational Methods, had the following membership at the time it reviewed and approved this standard:

A. O. Smetana (Chair), *Savannah River National Laboratory*  
A. Weitzberg (Vice Chair), *Individual*

S. L. Anderson, *Westinghouse Electric Company*  
W. H. Bell, *American Institute of Chemical Engineers*  
R. R. Brey, *Health Physics Society*  
R. E. Carter, *Individual*  
D. M. Cokinos, *Brookhaven National Laboratory*  
M. L. Corradini, *National Council on Radiation Protection and Measurement*  
B. K. Grimes, *Individual*

A. C. Kadak, *Massachusetts Institute of Technology*  
L. I. Kopp, *Individual*  
D. R. Lawson, *U.S. Department of Energy*  
P. M. Madden, *U.S. Nuclear Regulatory Commission*  
(Alt. A. Adams, Jr., *U.S. Nuclear Regulatory Commission*)  
J. F. Miller, *Institute of Electrical and Electronics Engineers*  
T. J. Myers, *National Institute of Standards and Technology*  
D. S. O'Kelly, *National Institute of Standards and Technology*  
J. E. Olhoeft, *Individual*  
R. E. Pevey, *University of Tennessee-Knoxville*  
C. T. Rombough, *CTR Technical Services, Inc.*  
C. E. Sanders, *University of Nevada, Las Vegas / Sanders Engineering*  
C. T. R. Schmidt, *Sandia National Laboratories*  
R. Tsukimura, *Aerotest Operations*  
A. R. Veca, *General Atomics*
