## **American National Standard**

Designation of this document as an American National Standard attests that the principles of openness and due process have been followed in the approval procedure and that a consensus of those directly and materially affected by the standard has been achieved.

This standard was developed under procedures of the Standards Committee of the American Nuclear Society; these procedures are accredited by the American National Standards Institute, Inc., as meeting the criteria for American National Standards. The consensus committee that approved the standard was balanced to ensure that competent, concerned, and varied interests have had an opportunity to participate.

An American National Standard is intended to aid industry, consumers, governmental agencies, and general interest groups. Its use is entirely voluntary. The existence of an American National Standard, in and of itself, does not preclude anyone from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard.

By publication of this standard, the American Nuclear Society does not insure anyone utilizing the standard against liability allegedly arising from or after its use. The content of this standard reflects acceptable practice at the time of its approval and publication. Changes, if any, occurring through developments in the state of the art, may be considered at the time that the standard is subjected to periodic review. It may be reaffirmed, revised, or withdrawn at any time in accordance with established procedures. Users of this standard are cautioned to determine the validity of copies in their possession and to establish that they are of the latest issue.

The American Nuclear Society accepts no responsibility for interpretations of this standard made by any individual or by any ad hoc group of individuals. Requests for interpretation should be sent to the Standards Department at Society Headquarters. Action will be taken to provide appropriate response in accordance with established procedures that ensure consensus on the interpretation.

Comments on this standard are encouraged and should be sent to Society Headquarters.

## Foreword

(This Foreword is not a part of American National Standard “Radiation Protection at Research Reactor Facilities,” ANSI/ANS-15.11-2009.)

In the fall of 1970, the American Nuclear Society Standards Committee established ANS-15, Operation of Research Reactors, under the auspices of the N17 Consensus Committee, Research Reactors, Reactor Physics, Radiation Shielding, and Computational Methods, to provide needed standards for the operation, use, and regulation of research reactors. Since then, numerous standards have been developed, and several working groups have been established, among them ANS-15.11.

In 1977, two standards dealing with radiation protection at research reactors were published: ANSI/ANS-15.11-1977 (N628), “Radiological Control at Research Reactor Facilities,” and ANSI/ANS-15.12-1977 (N647), “Design Objectives for and Monitoring of Systems Controlling Research Reactor Effluents.” These two standards were revised later and combined into a single standard, ANSI/ANS-15.11-1987, “Radiation Protection at Research Reactor Facilities.” Major changes to the regulations on standards for radiation protection and to the recommendations of the National Council on Radiation Protection and Management and the International Commission on Radiological Protection, significantly impacting research reactors, were incorporated into the revision, ANSI/ANS-15.11-1993

Work on this standard began in January of 2003 and culminated in July of 2009 with unanimous approval by the N17 Consensus Committee. The current revision addresses applicable changes and provides directions on implementation, including meeting the objectives and principles of as-low-as-is-reasonably-achievable (ALARA) levels of radiation.

This standard might reference documents and other standards that have been superseded or withdrawn at the time the standard is applied. A statement has been included in the “References” section that provides guidance on the use of references.

The membership of ANS-15.11 contributing to this standard is as follows:

S. R. Reese (Chair), *Oregon State University*

C. H. Bassett, *U.S. Nuclear Regulatory Commission*

D. R. Brown, *National Institute of Standards and Technology*

D. Feltz, *Individual*

S. G. Frantz, *Reed College*

S. A. Menn, *Oregon State University*

D. S. O’Kelly, *University of Texas at Austin*

P. B. Perez, *AREVA NP*

T. M. Raby, *National Institute of Standards and Technology*

W. J. Richards, *National Institute of Standards and Technology*

T. R. Schmidt, *Individual*

In preparing this standard, the intent has been to specify objectives that will achieve the following results:

- (1) Establish a comprehensive radiation protection program that deals with all matters involving radiation and radioactive materials at research reactors;
- (2) Limit exposures and releases to ALARA levels without seriously restricting the operation of existing reactors, inhibiting growth and upgrade, or discouraging the development of new research reactors;
- (3) Set a reasonably low activity level threshold, above which measurements will be required that will allow for the use of readily available instrumentation without resorting to extraordinary means.

In the process of creating standards with respect to existing and varied practices in many operating facilities, it is important to consider the following:

- (1) It is not intended that the standard be used as a demand model for backfitting purposes;
- (2) The standard can be a significant aid for existing and new owners or operators;
- (3) The standard can be helpful for a facility undergoing change or modification;
- (4) The standard's considered use can assist in implementing regulatory requirements.

Prior to using the standard, individual facilities ought to carefully examine their license, permit, or other requirements for limiting conditions that might not be compatible with the standard or new regulatory requirements and that might require change, amendment, or special authorization. Care also ought to be exercised in using appropriate units as might be specified by authorities.

The standard does not address certain conditions that do not occur or are known not to exist at research reactor facilities such as planned special exposures, facilities-specific public dose limits, and hot particle contamination. Individual facilities ought to address these issues, if needed, in their programs.

The family of American National Standards developed by ANS-15 for research reactors are the following:

ANSI/ANS-15.1-2007, "The Development of Technical Specifications for Research Reactors";

ANSI/ANS-15.2-1999 (R2009), "Quality Control for Plate-Type Uranium-Aluminum Fuel Elements";

ANSI/ANS-15.4-2007, "Selection and Training of Personnel for Research Reactors";

ANSI/ANS-15.7-1977, "Research Reactor Site Evaluation" (withdrawn);

ANSI/ANS-15.8-1995; R2005, "Quality Assurance Program Requirements for Research Reactors";

ANSI/ANS-15.10-1981, "Decommissioning of Research Reactors" (withdrawn);

ANSI/ANS-15.11-2009, "Radiation Protection at Research Reactor Facilities";

ANSI/ANS-15.15-1978, "Criteria for the Reactor Safety Systems of Research Reactors" (withdrawn);

ANSI/ANS-15.16-2008, "Emergency Planning for Research Reactors";

ANSI/ANS-15.17-1981; R1987; R2000, "Fire Protection Program Criteria for Research Reactors";

ANSI/ANS-15.19-1991, "Shipment and Receipt of Special Nuclear Material (SNM) by Research Reactor Facilities" (withdrawn);

ANS-15.20-20xx, "Criteria for the Reactor Control of Safety Systems of Research Reactors" (under development);

ANSI/ANS-15.21-1996; R2006, "Format and Content for Safety Analysis Reports for Research Reactors"

The membership of Subcommittee ANS-15 at the time this standard was approved is as follows:

W. J. Richards (Chair), *National Institute of Standards and Technology*

A. Adams, Jr., *U.S. Nuclear Regulatory Commission*  
L. M. Bobek, *University of Massachusetts Lowell*  
J. Bryson, *Sandia National Laboratories*  
C. D. Cooper, *Bechtel BWXT*  
M. L. Gildner, *Oak Ridge National Laboratory*  
J. Jenkins, *Purdue University*  
M. Krause, *University of Texas*  
C. McKibben, *University of Missouri–Columbia*  
S. Miller, *AFRRI/NMC*  
T. Myers, *National Institute of Standards and Technology*  
D. S. O’Kelly, *University of Texas at Austin*  
S. R. Reese, *Oregon State University*

Consensus Committee N17, Research Reactors, Reactor Physics, Radiation Shielding, and Computational Methods, had the following membership at the time it reviewed and approved this standard:

T. M. Raby (Chair), *National Institute of Standards and Technology*

A. Weitzberg (Vice Chair), *Individual*

W. H. Bell, *American Institute of Chemical Engineers*  
(Alt. R. D. Zimmerman, *American Institute of Chemical Engineers*)  
R. E. Carter, *Individual*  
D. M. Cokinos, *Brookhaven National Laboratory*  
B. Dodd, *Health Physics Society*  
E. Ehrlich, *General Electric*  
B. K. Grimes, *Individual*  
N. E. Hertel, *Georgia Institute of Technology*  
C. Heysel, *McMaster University*  
W. A. Holt, *Individual*  
W. C. Hopkins, *Individual*  
M. A. Hutmaker, Jr., *U.S. Department of Energy*  
A. C. Kadak, *Massachusetts Institute of Technology*  
L. I. Kopp, *Individual*  
P. M. Madden, *U.S. Nuclear Regulatory Commission*  
(Alt. A. Adams, Jr., *U.S. Nuclear Regulatory Commission*)  
J. F. Miller, *Institute of Electrical and Electronics Engineers*  
J. E. Olhoeft, *Individual*  
R. E. Pevey, *University of Tennessee–Knoxville*  
C. T. Rombough, *CTR Technical Services, Inc.*  
W. J. Richards, *National Institute of Standards and Technology*  
T. R. Schmidt, *Sandia National Laboratories*  
S. H. Shepherd, *Southern California Edison*  
A. O. Smetana, *Savannah River National Laboratory*  
R. Tsukimura, *Aerotest Operations*  
S. H. Weiss, *National Institute of Standards and Technology*  
(Alt. T. J. Myers, *National Institute of Standards and Technology*)  
A. R. Veca, *General Atomics*
