American National Standard Burnup Credit for LWR Fuel

Secretariat American Nuclear Society

Prepared by the American Nuclear Society Standards Committee Working Group ANS-8.27

Published by the American Nuclear Society 555 North Kensington Avenue La Grange Park, Illinois 60526 USA

Approved November 10, 2015 by the **American National Standards Institute, Inc.** 

### American National Standard

Designation of this document as an American National Standard attests that the principles of openness and due process have been followed in the approval procedure and that a consensus of those directly and materially affected by the standard has been achieved.

This standard was developed under the procedures of the Standards Committee of the American Nuclear Society; these procedures are accredited by the American National Standards Institute, Inc., as meeting the criteria for American National Standards. The consensus committee that approved the standard was balanced to ensure that competent, concerned, and varied interests have had an opportunity to participate.

An American National Standard is intended to aid industry, consumers, governmental agencies, and general interest groups. Its use is entirely voluntary. The existence of an American National Standard, in and of itself, does not preclude anyone from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard.

By publication of this standard, the American Nuclear Society does not insure anyone utilizing the standard against liability allegedly arising from or after its use. The content of this standard reflects acceptable practice at the time of its approval and publication. Changes, if any, occurring through developments in the state of the art, may be considered at the time that the standard is subjected to periodic review. It may be reaffirmed, revised, or withdrawn at any time in accordance with established procedures. Users of this standard are cautioned to determine the validity of copies in their possession and to establish that they are of the latest issue.

The American Nuclear Society accepts no responsibility for interpretations of this standard made by any individual or by any ad hoc group of individuals. Inquiries about requirements, recommendations, and/or permissive statements (i.e., "shall," "should," and "may," respectively) should be sent to the Scientific Publications and Standards Department at Society Headquarters. Action will be taken to provide appropriate response in accordance with established procedures that ensure consensus.

Comments on this standard are encouraged and should be sent to Society Headquarters.

Inquiry Requests	The American Nuclear Society (ANS) Standards Committee will provide responses to inquiries about requirements, recommendations, and/or permissive statements (i.e., "shall," "should," and "may," respectively) in American National Standards that are developed and approved by ANS. Responses to inquiries will be provided according to the Policy Manual for the ANS Standards Committee. Nonrelevant inquiries or those concerning unrelated subjects will be returned with appropriate explanation. ANS does not develop case interpretations of requirements in a standard that are applicable to a specific design, operation, facility, or other unique situation only and therefore is not intended for generic application.
	Responses to inquiries on standards are published in ANS's magazine, <i>Nuclear News</i> , and are available publicly on the ANS Web site or by contacting the ANS Scientific Publications and Standards Department.
Inquiry	Inquiry requests shall include the following:
Format	(1) the name, company name if applicable, mailing address, and telephone number of the inquirer;
	(2) reference to the applicable standard edition, section, paragraph, figure, and/or table;
	(3) the purpose(s) of the inquiry;
	(4) the inquiry stated in a clear, concise manner;
	(5) a proposed reply, if the inquirer is in a position to offer one.
	Inquiries should be addressed to
	American Nuclear Society ATTN: Scientific Publications and Standards Department 555 N. Kensington Avenue La Grange Park, IL 60526
	or <u>standards@ans.org</u>

## **Foreword** (This foreword is not a part of American National Standard "Burnup Credit for LWR Fuel," ANSI/ANS-8.27-2015.)

Burnup credit is a term commonly used to account for an overall negative reactivity effect resulting from irradiation. In order to apply burnup credit, there needs to be both supporting analyses and implementation steps (such as procedures, burnup assignments, and verification techniques).

Including burnup credit in the design and operation enables much improved flexibility (e.g., wider range of acceptable fuel) and efficiency (e.g., higher loading capacities), as compared to spent fuel system designs based on unirradiated fuel without credit for fixed burnable absorbers. These advantages have encouraged burnup credit to be applied in the nuclear criticality safety evaluation of storage, transportation, and disposal systems containing irradiated fuel. The scope of this standard is restricted to burnup credit for commercial light water reactor fuel applications.

Burnup credit requires evaluation of the effect of irradiation on the fuel composition, which increases the *computation* complexity. However, the negative reactivity determined through burnup credit may be used to reduce the *overall* complexity of maintaining criticality safety. Several American National Standards Institute/American Nuclear Society (ANSI/ANS) standards provide guidance that is relevant to burnup credit. This standard supplements the guidance given in those standards and provides requirements and recommendations for handling the unique issues associated with the implementation of burnup credit.

The 2015 revision to this standard was limited to two clarifications in the text of the standard. First, it clarified the combined validation approach given in Sec. 5.2 by adding a second paragraph which introduces a new term,  $\Delta k_d$ , which is an allowance for the bias and uncertainty in bias of the change in k with irradiation. Second, the 2015 revision makes it clear that the burnup uncertainty can be statistically combined with other uncertainties. In addition to these clarifications, an appendix on boiling water reactor pool burnup credit was added.

This standard might reference documents and other standards that have been superseded or withdrawn at the time the standard is applied. A statement has been included in the reference section that provides guidance on the use of references.

Working Group ANS-8.27 of ANS Subcommittee 8, Fissionable Materials Outside Reactors, drafted this standard. The following members participated in the preparation:

D. B. Lancaster (Chair), NuclearConsultants.com

C. T. Rombough (Secretary), CTR Technical Services, Inc.

S. Anton, Holtec International
S. P. Baker, TransWare Enterprises, Inc.
A. Barto, U.S. Nuclear Regulatory Commission
K. L. Bennett, GE Hitachi Nuclear Energy
M. C. Brady Raap, Pacific Northwest National Laboratory
J. P. Coletta, Duke Energy
J. C. Hannah, Global Nuclear Fuel
E. Knuckles, Individual
Z. Martin, Tennessee Valley Authority
J. R. Massari, Constellation Energy

D. Mennerdahl, Individual–Sweden
W. A. Metwally, University of Sharjah–United Arab Emirates
D. Mueller, Oak Ridge National Laboratory
P. Narayanan, TransNuclear, Inc.
C. V. Parks, Oak Ridge National Laboratory
H. Pfeifer, Nuclear Analysis Company International
M. Rahimi, U.S. Nuclear Regulatory Commission
D. A. Thomas, AREVA Inc.
K. Wood, U.S. Nuclear Regulatory Commission
A. Zimmer, General Atomics
J. F. Zino, GE Nuclear Energy

The following is a list of people who supported the working group but were not able to actively participate throughout the entire process:

A. Attard, R. Beall, J. Boshoven, D. Cacciapouti, K. Cummings, M. DeHart, M. DeVoe, J. Dunlap, D. Galvin, J. Gulliford, R. Hall, L. Hassler, R. Hommerson, D. Hutson, R. Jones, J. Kessler, L. Kopp, V. Kucukboyaci, R. Kunita, A. Machiels, L. Markova, W. Marshall, M. Mason, R. McKnight, V. Mills, S. Mitake, G. O'Connor, P. O'Donnell, H. Toffer, S. Turner, J. Wagner, G. Walden, C. Walker, A. H. Wells, B. Wilson, C. Withee

This standard was prepared under the guidance of ANS Subcommittee 8, which had the following membership at the time of its approval:

L. E. Paulson (Chair), *GE Hitachi Nuclear Energy* M. Crouse (Secretary), *Link Solutions, Inc.* 

J. S. Baker, Savannah River Nuclear Solutions

E. Elliott, Los Alamos National Laboratory

D. Erickson, Savannah River Nuclear Solutions

A. S. Garcia, U.S. Department of Energy

B. O. Kidd, Babcock & Wilcox Nuclear Operations Group

K. Kimball, *B&W Y-12*, *LLC* 

D. Kupferer, Defense Facilities Nuclear Safety Board

T. P. McLaughlin, Individual

S. Monahan, Sandia National Laboratories

J. A. Morman, Argonne National Laboratory

T. A. Reilly, Individual

H. Toffer, Individual

C. Tripp, U.S. Nuclear Regulatory Commission

D. Winstanley, Sellafield Sites-United Kingdom

The membership of the Nuclear Criticality Safety Consensus Committee, which reviewed and approved this standard in 2015, had the following membership:

R. D. Busch (Chair), University of New Mexico

L. L. Wetzel (Vice Chair), Babcock & Wilcox Nuclear Operations Group

W. R. Shackelford (Secretary Pro Tem), Nuclear Fuel Services, Inc.

R. Bartholomay, URS Professional Solutions, LLC

L. Berg, U.S. Department of Energy

W. Doane, AREVA Inc.

R. S. Eby, American Institute of Chemical Engineers (Employed by USEC, Inc.)

C. M. Hopper, *Individual* 

- B. O. Kidd, Babcock & Wilcox Nuclear Operations Group
- R. Knief, Institute of Nuclear Materials Management (Employed by Sandia National Laboratories)
- T. Marenchin, U.S. Nuclear Regulatory Commission
- S. P. Murray, Health Physics Society (Employed by General Electric)
- W. R. Shackelford, Nuclear Fuel Services, Inc.
- R. G. Taylor, INM Nuclear Safety Services
- R. M. Westfall, Oak Ridge National Laboratory
- R. E. Wilson, U.S. Department of Energy
