

## Selected papers from the 2023 Nuclear and Emerging Technologies for Space Topical Meeting (NETS 2023)

### Contents

#### RESEARCH ARTICLES

- S1** Key Technologies for Korean Space Heat Pipe Reactor  
*Byung Ha Park, Chan Soo Kim, Sung Hoon Choi, Sung Nam Lee*
- S12** Exploring the Feasibility of Kuiper Belt Missions Supported by Centrifugal Nuclear Thermal Propulsion  
*William Ziehm, L. Dale Thomas*
- S21** Developing a Three-Dimensional Bubble Dynamics Model for Centrifugal Nuclear Thermal Propulsion  
*Pongkrit Darakorn na Ayuthya, Jason T. Cassibry*
- S38** Feasibility of a Small, Low-Power RTG Concept Utilizing a GPHS Heat Source  
*Kenton Sherick, Aniruddha Ray, Pierre Berneron, B. Allen Tolson, Chadwick Barklay, Maarten den Heijer, Christofer E. Whiting*
- S49** Fission Surface Power—A Conceptual 350-kW(thermal) Microreactor Designed for Lunar Power Around SpaceX Falcon Heavy Mass Constraints  
*Daniel L. P. Watson, Ronald Daryll E. Gatchalian, Hui-Yu Hsieh, Pramatha Bhat, Pavel V. Tsvetkov*
