

Special Issue on the 2024 International Conference on Physics of Reactors (PHYSOR 2024)

Contents

i Foreword

Max Fratoni, Chris Perfetti, Eva Davidson, Brendan Kochunas, Luka Snoj

REVIEW ARTICLES

- S1** Resonance Treatment of Double-Heterogeneous Fuel Using a Deterministic Statistical Geometry Method in Heterogeneous Transport Calculation Code GALAXY-Z
Kazuya Yamaji, Hiroki Koike, Koji Asano, Satoshi Takeda, Akio Yamamoto
- S15** Study of the Phenomena Affecting the Efficiency of the Fission Gas Removal System in the Fuel Circuit of a Molten Salt Reactor
M. Marone, P. Rubiolo, N. Capellan, J. Giraud
- S39** Squirrel: A MOOSE-Based App for Solving Point Kinetics in Molten Salt Reactors
P. Pfahl, A. Chambon, J. Groth-Jensen, B. Lauritzen
- S52** Impact of the Multigroup Velocity Approximation in the Evaluation of the Effective Neutron Lifetime
Giorgio Valocchi, Elias-Yammir Garcia-Cervantes, Laurent Buiron, Jean Tommasi
- S63** Real-Time State Estimation of Neutron Flux in Molten Salt Fast Reactors from Out-Core Sparse Measurements
Stefano Riva, Sophie Deanesi, Carolina Introini, Stefano Lorenzi, Antonio Cammi

RESEARCH ARTICLES

- S77** A General Formulation of the Resonance Spectrum Expansion Self-Shielding Method
Alain Hébert
- S91** Simplified Treatment of Coating Layers in TRISO Fuel in Statistical Geometry Method in Monte Carlo Calculation
Akio Yamamoto, Tomohiro Endo, Satoshi Takeda, Kazuya Yamaji, Hiroki Koike, Koji Asano
- S105** Linear Sources and Anisotropic Scattering in the Random Ray Method
Rufus Neame, Paul Cosgrove
- S122** Optimized Dropping and Rolling and Virtual Surface Method for High Packing Fraction of Dispersed Fuel Particles in Annular Container
Zhiyuan Feng, Jingang Liang, Wenli Guo, Kan Wang

—continued—

Contents continued

VOLUME 200 · NUMBER S1 · 2026

- S131** Reactivity Impact of Updated ^{35}Cl Nuclear Data on the Molten Chloride Reactor Experiment
T. Cisneros, M. Wargon, B. Harper, K. Hanselman, T. Kawano, S. A. Kuvin, H. Y. Lee
- S142** Verification and Validation of the VANGARD Pinwise Nodal Code with Analyses of BEAVRS
Seoyoon Jeon, Brendan Kochunas
- S166** Improving the Resolution and Computational Efficiency of Depletion Simulations on a TRISO-Fueled Microreactor
Keenan J. Hoffman, Alexis Maldonado, Todd S. Palmer
- S180** Fuel Cycle Performance of the Wielenga Innovation Static Salt Reactor
Puran Deng, Won Sik Yang, Thomas Wielenga
- S198** Stochastic Optimization to Find Optimum Beginning-of-Life Core Configuration of Stable Salt Reactor with Online Refueling
Seungug Jae, Won Sik Yang, Thanh Hua, Yan Cao, Tom Taylor, Luke Godfrey
- S212** Dynamics of Molten Salt Reactor with Operating Heaters
Thabit Abuqudaira, Pavel Tsvetkov, Piyush Sabharwall
- S234** Analytical Description of the Neutron Up-Scattering in the Resonance Range
A. Bengochea, G. Noguere, D. Bernard, P. Tamagno
- S245** Welch Method and Bootstrapping Applied to Subcritical Gamma Noise
Flynn B. Darby, Schuyler J. Tyler, Oskari V. Pakari, Vincent P. Lamirand, Shaun D. Clarke, Andreas Pautz, Sara A. Pozzi
- S253** Temperature Prediction for the Sirius-2c Nuclear Propulsion Fuel Experiment Conducted at the TREAT Facility
Mustafa K. Jaradat, Sebastian Schunert, Frederick N. Gleicher, Mark DeHart
- S270** First Order Response Matrix Benchmark for the 1D Transport Equation with Matrix Scaling
B. D. Ganapol, J. K. Patel
- S283** A Genetic-Driven Optimization of the Energy Grid Structure for Nodal Full-Core Calculations in Lead-Cooled Fast Reactors
Nicolò Abrate, Alex Aimetta, Mattia Massone, Sandra Dulla, Piero Ravetto

—continued—

Contents continued

VOLUME 200 · NUMBER S1 · 2026

- S309** Multistep Criticality Search and Power Shaping in Nuclear Microreactors with Deep Reinforcement Learning
Majdi I. Radaideh, Leo Tunkle, Dean Price, Kamal Abdulraheem, Linyu Lin, Moutaz Elias
- S322** Developing a Deterministic Calculation Scheme for Perturbations of In-Core Instrumentation of an MTR Core in Support of Bayesian Calibration
S. Lapaire, T. Bonaccorsi, J-M. Palau
- S332** Comparison of ^{238}U and ^{235}U Fission Chambers for Monitoring the Reactivity of the VENUS-F Accelerator-Driven Subcritical Reactor Using the Current-to-Flux Method
Nathalie Marie, Annick Billebaud, Sébastien Chabod, Anatoly Kochetkov, Antonin Krása, François-René Lecolley, Jean-Luc Lecouey, Grégory Lehaut, Nadia Messaoudi, Guido Vittiglio, Jan Wagemans
- S342** A Novel ERANOS Procedure for Sensitivity Analyses in Core Depletion Problems: Implementation Details and Verification
Matteo Stanzani, Donato M. Castelluccio, Francesco Lodi, Vincenzo G. Peluso, Giacomo Grasso, Marco Sumini
- S366** Assessment of the Influence of Secondary Sources on the Thermal-Hydraulic Behavior of FRM II Using Serpent 2 and Ansys CFX
Kaltrina Shehu, Daniel Bonete Wiese, Christian Reiter
- S378** A 2-D Physics Study for Understanding Moderator Temperature Coefficient of Burnable Absorber-Loaded Prismatic High-Temperature Helium-Cooled Reactor
Davide Bazzani, S. Wijaya, A. Cammi, Y. Kim
- S391** Selection of Sampling and Surrogate Modeling Methods for State-Point Evaluations of an AGN-201M Reactor
Quinton J. Williams, Ryan H. Stewart, Todd S. Palmer, Camille J. Palmer, Chad Pope, Ashley Shields, Christopher Ritter
- S406** Measurement of the Prompt Neutron Decay Constant in a Zero-Power Reactor Using a Novel 3D Detector System
Michel Saliba, Vincent Lamirand, Wilfried Monange, Fanny Vitullo, Mathieu Hursin, Andreas Pautz, Oskari Pakari
- S415** Time-Dependent Variants of The Random Ray Method for Transient Simulations
Maximilian Kraus, Paul Cosgrove, Eugene Shwageraus

—continued—

Contents continued

VOLUME 200 · NUMBER S1 · 2026

- S436** Prediction of Exotic (n,2n) Cross Sections Using a Regression Tree Machine Learning Algorithm
Rohan Teelock-Gaya, Valeria Raffuzzi, Eugene Shwageraus, Lee Morgan
- S456** An Iterative RSA-DEM Method for High Particle Packing Fraction Stochastic Media
Zhe Chuan Tan, Zhi Yuan Feng, Kan Wang
- S466** A New Calculation Method Using Pathlines for Delayed Neutron Precursors in Liquid Nuclear Fuels
Mathis Caprais, André Bergeron, Nathan Greiner, Daniele Tomatis
- S485** Application of the Random Ray Method to Variance Reduction in Radiation Shielding Problems
Valeria Raffuzzi, Rufus Neame, Paul Cosgrove
- S503** Comparison of Analytical Models for Frequency Response and Linear Stability of Molten Salt Reactors
Lubomír Bureš
- S527** Hermes Reactor Demonstration, Initial Startup, and Physics Testing
Nader Satvat, Richard Hernandez, Fanny Vitullo, Kyrone Riley, Massimiliano Fratoni, Brandon Haugh, Edward Blandford
- S538** Uncertainty Analysis of the Reaction Rates in Ringhals
Jacob Persson
- S546** Coupled Adjoint-Based Perturbation Theory for Dynamics and Heat Transfer Multiphysics for Nuclear Transients
Alexis Maldonado, Christopher M. Perfetti
- S565** Neutron Noise Measurements of a Fast HEU Copper System
Cole Kostelac, Robert Weldon, Nicholas Whitman, Nicholas Thompson, Theresa Cutler, Kelsey Amundson, Ayodeji Alajo
- S574** Deterministic High-Fidelity Neutronics Simulation of Pebble Bed Reactors Using Pebble Tracking Transport
Liam Carlson, Jean C. Ragusa, Paolo Balestra, Yaqi Wang

—continued—

Contents continued

VOLUME 200 · NUMBER S1 · 2026

- S595** Development of Serpent/CTF External Coupling for the OECD/NEA TVA-WB1 Benchmark Activities
T. Albagami, P. Rouxelin, A. Abarca, S. Palmtag, M. Avramova, K. Ivanov
- S611** Material Composition Interpolation for High-Assay Low-Enriched Uranium Fuel Macroscopic Cross-Section Estimation Using Gaussian Process
Junsu Kang, Andrew M. Ward, Ugur Mertuyrek, Thomas J. Downar
- S625** Parallel Simulated Annealing, Genetic Algorithms, and Hybrid Method Applied to the Multiobjective Optimization of the Nuclear In-Core Fuel Management
Wojciech Kubinski, Gianluca Giorgi, Mathieu Segond
- S644** Multiphysics Running-In Simulations for Pebble-Bed Reactors with Griffin
Joshua Hanophy, Paolo Balestra, Yaqi Wang, Javier Ortensi, Sebastian Schunert
- S659** Quantification and Propagation of Uncertainties in R-Matrix Limited Resonance Parameters
Pierre Sole, Vaibhav Jaiswal, Cédric Jouanne
- S676** Reactor Physics Modeling Challenges for the FLEX Reactor
Simon Boddington, Tom Taylor, Peter Haigh, Eduardo Cuoc, Chris Hankinson, Luke Godfrey
- S693** First Steps of the ANTARES Validation for Steady States with TVA Watts Bar Unit 1 Cycle 1 Benchmark
Franck Bernard, Sébastien Bonthoux, Marc Forestier, Antonio Sargeni, Julien Taforeau
- S707** An Optimization Approach to Improve Thermal Scattering Law Using Experimental Total Cross-Section Data
Vaibhav Jaiswal, Pierre Sole
- S727** Assessing the Impact of Improved Thermal Conductivity of UO₂-Mo Fuel Using the ENIGMA Fuel Performance Code
Aiden Peakman, Glyn Rossiter

—continued—

Contents continued

VOLUME 200 · NUMBER S1 · 2026

- S741** First Results for Uranium Nitride Fuel Characterization Using an Accelerated Fuel Qualification Process
Zachary Miller, Landon Johnson, Lorena Alzate-Vargas, Jason Rizk, Christopher Matthews, Michael W. D. Cooper, Vedant Mehta, David A. Andersson, Galen T. Craven, Massimiliano Fratoni, Alex Levinsky

NOTE

- S754** Development of New GPU-Optimized Reactor Physics Monte Carlo Code GREAPMC
Muhammad Rizwan Ali, Murat Serdar Aygul, Deokjung Lee
