

Radwaste Solutions

Volume 21, Number 2
April–June 2014

A team of IAEA experts inspect water tanks at Japan's Fukushima Daiichi. See what they found starting on page 38.

Features

Cover Stories: Low-Level Waste

How Low Can You Go?

Research conducted by EPRI examines lessons learned in the development and implementation of LLW management policy and regulations.

17

Test Reactor, Waste Vault Removed from River Corridor

Within two months, workers removed two large pieces of equipment from Hanford's 300 Area, shipping them for on-site disposal.

22

10 CFR Part 61.55: Is it State of the Art?

A report from Waste Management 2014 on the NRC's proposed rule changes for LLW disposal.

32

Other Features

WIPP: The Road to Recovery

Crews descend into the Waste Isolation Pilot Plant as the DOE begins Phase 3 of its recovery process.

34

IAEA Report on Fukushima Daiichi Decommissioning

An excerpt from an IAEA report to the Government of Japan on the decommissioning of Fukushima assesses the management of contaminated water at the site.

38

Meeting Report

40 Years of Meeting the Global Challenges of Waste Management

A report from Waste Management 2014, sponsored by WM Symposia, Inc., and held March 2–6, 2014, in Phoenix, Ariz.
