FOREWORD	xxi
PREFACE	xxiii

Chapter 1 Introduction

1.1 Why Is This Accident So Important to the Nuclear Industry Today?	1
1.2 The Approach Taken in This Book	10

Chapter 2 Design Considerations

2.1 General Description	13
2.2 Reactor Core	20
2.3 Reactor Coolant System	30
2.4 Pressurizer	31
2.5 Containment (Reactor Building)	34
2.6 The Reactimeter	36

Chapter 3 Overview of the Accident

3.1	The Initial Transient	39
3.2	The Evolving Event	45
3.2.1	Before the Reactor Core Was Uncovered	45
3.2.2	Uncovering of the Reactor Core	52
3.2.3	Release of Radioactive Gases into the Containment Atmosphere	55
3.2.4	Major Core Damage	58
3.2.5	Reflooding an Overheated and Badly Damaged Core	64
3.2.6	Melt Relocation	67
3.2.7	Overheating of the RPV Wall and Cooling of the Core Debris	68

Chapter 4 Accident Management Considerations

4.1	Accident Management Goals	71
4.2	The Basics	74
4.3	Severe Accident Phenomena	76
4.4	Accident Management Framework	80
4.4.1	RCS and Containment Isolation	81
4.4.2	Cooling of the Core Materials	82
4.4.3	Reactivity Considerations	83
4.4.4	Heat Removal Capability	86
4.4.5	Hydrogen Combustion/Carbon Monoxide Combustion	87
4.4.6	Consequential Damage to the Fission Product Barriers	87
4.5	Key Symptoms for Accident Management Decisions	88
4.6	Uncertainties to Be Considered in AM Evaluations	91
4.6.1	Hydrogen Combustion	92
4.6.2	Could the Accident State Suddenly Change?	93
4.6.3	What Is the Core Reactivity?	97
4.6.4	How Coolable Is the Debris Configuration?	100
4.7	Summary	103

Chapter 5 The TMI-2 Accident and Accident Management Considerations

5.1	Overview	105
5.2	Loss of Coolant Inventory	106

5.3	Heatup of the Reactor Core	113
5.4	Fuel Pin Cladding Oxidation	115
5.5	Thermal Attack of the In-Core Structures and Fission Product Release	117
5.5.1	Relocation of the Absorber Materials	118
5.5.2	In-Core Instrument Thimbles and Fission Product Release	119
5.5.3	Influence of Core Material Relocation on the In-Core Instruments	136
5.6	Fission Product Release from the Fuel and Transport	140
5.7	Liquefaction of the Uranium Dioxide Fuel	141
5.8	Downward Relocation of the Molten Debris	141
5.9	Reflooding of an Overheated Core	144
5.9.1	Rapid Steam Generation	146
5.9.2	Additional Hydrogen Generated	153
5.9.3	Changes in the Core Geometric Configuration	154
5.10	Energy Transfer from a Submerged Compacted Core	157
5.11	Relocation of Molten Debris Out of the Original Core Boundaries	163
5.12	In-Vessel Steam Explosions	171
5.13	Rapid Steam Generation	180
5.14	Debris Configuration in the Lower Plenum	185
5.15	Thermal Attack of the RPV Lower Head	192
5.16	Challenges to the RPV Structural Integrity	202
5.16.1	Possible Failure of the In-Core Instrument Penetrations	202
5.16.2	RPV Failure Due to Material Creep	206
5.17	Ultimate Cooling of the Core Debris	211
5.18	Release of Hydrogen to the Containment	216
5.19	Hydrogen Burns	218
Chapter 6 A Summary of the Accident Management Lessons Learned		223
Appendix Accident Chronology		231
