Forewordxi
Acronyms	xiii
Preface	xv
Chapter 1 Industrial Accidents Involving Large Vapor/Steam Explosions	1
1.1 Non-Nuclear Explosion Boiling Studies	1
1.1.1 Smelt–Water Explosions	2
1.1.2 Metal–Water Interactions	2
1.1.3 Intentional LNG Spills	3
1.2 Nuclear Incidents	4
1.2.1 Nuclear Test Reactors	4
1.2.2 Water-Cooled versus Water-Moderated Thermal Reactors	7
1.3 Objective of This Book	8
Chapter 2 Basic Considerations of Large-Scale Vapor Explosions and Their Application to Nuclear Fast and Thermal Reactor Safety	11
2.1 Technical Basis for Coarse Intermixing, Triggering, and Propagation	11
2.1.1 Coarse Intermixing	20
2.1.2 Triggering an Explosion	22
2.1.3 Propagation of an Explosion and Fine-Scale Fragmentation	24
2.2 Large-Scale Vapor Explosion Requirements	28
2.3 Application to Nuclear Reactor Systems	34
2.4 Assessment of Fuel–Coolant Interactions in the Fast Breeder Reactor Core Disruptive Accident	38
2.4.1 Introduction	38
2.4.2 General Behavior Principles and Contact Modes	39
2.4.3 CORECT-II Experiments	49
2.4.4 Concluding Remarks and Summary	54

Chapter 3 Experimental Basis for Water-Cooled Reactor Evaluations	57
3.1 Methodology for Assessing the Coarse Mixing Conversion Ratios for Explosive Interactions	59
3.2 Early Investigations with Reactive Metals	65
3.2.1 Long's Aluminum–Water Studies	67
3.2.2 Aluminum–Water Studies by Hess	69
3.2.3 Reactive Metal–Water Studies by Higgins	70
3.2.4 Shock Tube Tests by Wright	75
3.3 Sandia National Laboratory Experiments	77
3.3.1 Early Sandia Thermite and Corium Experiments	77
3.3.2 Sandia Steam Explosion Efficiency Studies and FITS-A Tests	80
3.3.3 Sandia FITS-B Tests	88
3.3.4 Single-Droplet Tests	93
3.4 Winfrith Tests	100
3.4.1 Aluminum–Water Experiments	100
3.4.2 Experimental Scaling of Melt–Water Interactions	101
3.4.3 Stratified Aluminum–Water Tests	105
3.4.4 Prototypic Molten Fuel–Water Tests	105
3.5 JAERI Steam Explosion Tests	109
3.6 ISPRA KROTOS Experiments	113
3.7 The FARO Tests	118
3.8 The COTELS Investigations	122
3.9 The TROI Experiments	127
3.10 Argonne National Laboratory Experiments	130
3.10.1 FCI Experiments with Realistic Core Materials	130
3.10.2 Aluminum–Water Experiments	131
3.10.3 ZREX Test Series	132
3.11 Experiments Demonstrating the Influence of System Pressure	142
3.11.1 ANL Freon-22 and Mineral Oil Experiments	144
3.11.2 The ISPRA Salt–Water Experiments	149
3.11.3 The JAERI ALPHA Tests	154
3.11.4 Related Small Quantity Experiments	154
3.11.4.1 Nelson's Experiments on the Influence of Pressure	154
3.11.4.2 Experiments Reported by Avedisian	155
3.11.4.3 Experiments Reported by Frost and Sturtevant (1986)	156
3.11.4.4 Water–Oil Emulsion Experiments Reported by Cho et al. (1991)	157
3.12 Influence of Stratified Conditions on the Reactor Vessel or on the Containment Floor	159
3.12.1 Investigations of Steam Explosion Interactions in a Stratified Configuration	159

3.12.1.1	The Investigations of Fry and Robinson (1979)	159
3.12.1.2	Experiments Reported by Anderson et al. (1988)	161
3.12.1.3	Experiments Performed by Bang and Corradini (1991)	165
3.12.1.4	Experiments Performed by Frost et al. (1993 and 1995)	170
3.12.1.5	Experiments Performed by Sainson et al. (1993)	173
3.12.1.6	Experiments Performed at the Swedish Royal Institute	174
3.12.1.7	Stratified Experiments with Gas Injection.	179
3.12.2	Evaluation of Stratified Conditions	179
3.13	Annular Flow Configuration: FARO Test L-33	181
3.14	Influence of Forced Interaction Conditions	186
3.14.1	The Molten Fuel Moderator Interaction Tests.	186
3.14.2	Tests Addressing Reactivity Insertion Accidents	194
3.14.2.1	Power Burst Facility Test RIA-ST-4	195
3.14.2.2	JAERI Tests in the Nuclear Safety Research Reactor	198
3.14.2.3	JAERI Out-of-Pile Tests	201
Chapter 4	Melt Breakup, Entrainment, Mixing, and Fragmentation	203
4.1	Coarse Mixing Prior to the Onset of a Vapor Explosion.	204
4.1.1	Melt Breakup and Coarse Mixing in Film Boiling	205
4.1.2	Transient Considerations for Coarse Fragmentation	210
4.1.3	Scaling Parameters for Melt Breakup and Coarse Mixing in Film Boiling	213
4.1.4	Experiments Related to Coarse Mixing and Water Depletion in Film Boiling	215
4.1.4.1	MIXA Experiments	215
4.1.4.2	MAGICO Experiments	219
4.1.4.3	QUEOS Experiments.	221
4.1.5	Comments Related to Coarse Mixing in Steam Explosion Experiments	223
4.1.5.1	The Sandia Large-Scale Aluminum–Water Experiments	223
4.1.5.2	The KROTOS Alumina–Water Experiments	224
4.2	Fine-Scale Fragmentation: Breakup of Drops in High-Velocity Flows	231
4.3	Liquid–Liquid Fragmentation and Mixing.	233
4.4	Drag Coefficients for Dense Dispersions	239
4.5	Influence of Freezing a Crust on a Molten Jet	243
4.6	Possible Influence of Gas Blow-Through on Liquid Fragmentation in the MFMI Tests	248
4.6.1	Experimental Features of the MFMI Tests	248
4.6.2	Melt Fragmentation in the MFMI-1 Tests	250
4.6.3	Melt Fragmentation in the MFMI-4 Test	252
4.7	A Summary Statement on Thermal Explosions	254

Chapter 5 The Magnitude of Combined Physical and Chemical Explosions . . . 257

5.1	A Mechanism for a Steam–Metal Chemical Explosion with Highly Reactive Metals.	257
5.2	Summary of Aluminum–Water Explosion Experiments in Which Chemical Explosions Were Observed	257
5.2.1	Hess et al. Externally Triggered Tests.	257
5.2.2	Battelle Columbus Aluminum–Water Tests.	259
5.2.3	Sandia National Laboratory NPR Tests	261
5.3	The Possible Role of Hydrogen in Causing a Chemical Explosion	266
5.3.1	Hydrogen Produced during Coarse Premixing Prior to the Explosion.	266
5.3.2	Hydrogen Dissolved during the Dwell Time Prior to the Explosion .	269
5.3.3	Additional Observations from the SNL Tests.	279
5.4	Heat Flux Leaving the Aluminum Droplets	282
5.5	Molten Aluminum–Water Shock Tube Experiments.	283
5.5.1	UCSB Shock Tube Experiments.	283
5.5.2	University of Wisconsin Shock Tube Experiments	284
5.6	Steam Explosion Experiments with Other Highly Reactive Metals.	293
5.6.1	Copper–Water Steam Explosion Experiments	293
5.6.2	Zirconium–Water Experiments	296

Chapter 6 BORAX, SPERT, and the SL-1 Accident. 298

6.1	Background	298
6.2	Relationship of BORAX, SPERT, and SL-1 to the Explosive Mechanisms Discussed in Chapters 3 and 5	299
6.3	BORAX-1 Experiment	303
6.4	SPERT-1 Experiment	307
6.5	SL-1 Accident	314
6.6	Summary	320

Chapter 7 Consistency throughout the Experimental Database 322

7.1	The Hot Liquid Must Be Greater Than a Minimum Temperature	322
7.2	Consistency between the Demonstration of No Significant Hydrodynamic Mixing and CMCR Bounding of the Available Data for Non-Chemically Reactive Systems	324
7.3	Consistency between Maximum Temperature Required to Initiate an Explosion and the Contact Interface Temperature .	325
7.4	Consistency between the Required Nucleation Process for an Explosion and the Observation That a Relatively Small Overpressure Can Prevent an Explosion	326

7.5	Consistency between the MAGICO, MIXA, and QUEOS Experiments with Respect to the Influence of Water Depletion	327
7.6	Consistency with Observations That the Forced Contact Mode Causes Direct Entrainment and Energy Transfer That Prevents the Accumulation of Masses with a Substantial Temperature Difference	327
7.7	Consistency between SNL Tests and KROTOS with Respect to the Difference between Alumina Melts and Corium Melts	328
7.8	CMCR Approach Easily Translates to a Quantified Explanation of the SNL NRP Experiments, BORAX-1, SPERT-1, and the SL-1 Accident	328
Chapter 8	Summary and Conclusions	330
8.1	General Behavioral Principles	330
8.2	Potential for Vapor Explosions with Sodium and Molten UO ₂	331
8.3	The Effective Efficiencies (Conversion Ratio) for Steam Explosions	332
8.4	The Mixing Processes to Be Considered for Vapor/Steam Explosions	333
8.5	The Potential for Steam Explosions to Transition into a Chemical Explosion	334
Appendix A	Simplified Representation of the Homogeneous Nucleation Temperature for a Liquid	337
Appendix B	Work Done by Vaporization	341
Appendix C	Material Properties Used in the Analyses	344
References	347
About the Authors	367
