CONTENTS

Preface xi

One: BASIC TOPICS AND NOMENCLATURE

1-1 Basic Time-Dependent Phenomena in Nuclear Reactors 1
1-2 Kinetics Versus Dynamics 2
Review Questions 3
References 3

Two: DELAYED NEUTRONS

2-1 Production of Prompt and Delayed Neutrons Through Nuclear Fission 5
2-2 Total Delayed Neutron Yields 8
2-3 Yields of Delayed Neutron Groups 10
2-4 Emission Spectra of Delayed Neutrons 16
Homework Problems 17
Review Questions 19
References 19

Three: PRELIMINARY FORMULATION OF THE POINT KINETICS EQUATIONS

3-1 Intuitive Point Kinetics—The Basic Concepts 21
3-1A The Prompt Neutron Balance Equation 21
3-1B Average Neutron Generation Time and Lifetime 23
3-1C The Effect of Delayed Neutrons—The Intuitive Point Kinetics Equations 26
3-2 One-Group Point Kinetics 28
3-2A The Diffusion Approximation as the Basis of Reactor Kinetics 28
3-2B Derivation of the One-Group Point Kinetics Equations 31
Homework Problems 35
Review Questions 36
References 37

Four: STATIC PERTURBATION THEORY

4-1 The Basic Reactor Eigenvalue Problem and the Perturbation Theory Approach 38
4-1A Motivations for a Perturbation Theory 38
4-1B Neutron Multiplication as an Eigenvalue Problem 39
4-1C The Basic Approach for the Calculation of an Eigenvalue Perturbation 41
4-2 First-Order Perturbation Theory 44
4-3 Exact Perturbation Theory 47
4-4 Applications of First-Order Perturbation Theory 49
Homework Problems 53
Review Questions 54
Reference 54

Five: THE POINT KINETICS EQUATIONS

5-1 The Exact Point Kinetics Equations 55
5-1A Flux Factorization and Weighting Functions 55
5-1B Derivation of the Exact Point Kinetics Equations for an Initially Critical Reactor 58
5-1C Derivation of the Exact Point Kinetics Equations for an Initially Subcritical Reactor 62
5-1D Reactivity in the Exact Point Kinetics Equations 66
5-1E Effective Delayed Neutron Fractions and Further Discussion of the Exact Point Kinetics Equations 71
5-2 The Point Reactor Model 75
Homework Problems 78
Review Questions 81
References 81

Six: SOLUTION OF BASIC KINETICS PROBLEMS

6-1 Kinetics for Small and Large Time Values 84
6-1A The Stationary Solution: Source Multiplication Formulas 84
6-1B Kinetics for Small Time Values 87
6-1C Asymptotic Transients and Inhour Formulas 97
6-1D Summary of Delayed Neutron Source Approximations 107
6-2 Transients with Constant Reactivity 111
6-2A The Prompt Jump in a Subcritical Reactor 111
6-2B The Prompt Jump in a Critical Reactor 118
6-2C Kinetics with One Group of Delayed Neutrons 121
6-2D Kinetics with Six Groups of Delayed Neutrons 126
Homework Problems 134
Review Questions 137

Seven: MICROKINETICS

7-1 Decomposition of Continuous Rates in Fission Chains 140
7-2 Characteristics of Individual Fission Chains 145
7-2A The Lifetime of Average Chains 145
7-2B The Neutron Density in an Average Chain 146
7-2C The Number of Neutrons in an Average Chain 146
7-3 The Fission Chains in Steady-State Reactors 147
7-3A Comparison with Static Chain Multiplication 147
7-3B Precursors and Criticality 148
7-3C Comparison of Static and Prompt Neutron Chains 148
7-4 Fission Chains in Reactor Transients 149
7-4A Reactivity-Step-Induced Transients 149
7-4B Prompt Jump and Delayed Adjustments 149
7-4C Source-Step-Induced Transients 151
7-5 Fission Chains and Source Multiplication Formulas 151
7-6 Interpretation of the Adjoint Flux 153
Homework Problems 155
Review Questions 157
References 157

Eight: APPROXIMATE POINT KINETICS

8-1 The Prompt Jump Approximation 158
8-1A Formulation and Implementation of the Prompt Jump Approximation 158
8-1B Application of the Prompt Jump Approximation 166
8-2 The Prompt Kinetics Approximation 171
8-2A Superprompt-Critical Transients Following a Step Reactivity Insertion 172
8-2B The Pseudo-Initial Flux for Transients Following a Ramp Reactivity Insertion 175
Homework Problems 180
Review Questions 181

Nine: MEASUREMENT OF REACTIVITIES

9-1 Survey and Conceptual Problems 183
9-1A Survey 183
9-1B Dynamic Versus Static Reactivities 186
9-1C The Exact Measurability of Reactivities 188
9-2 Static Measurements of Reactivities 190
9-2A Source Multiplication Method for a Single Reactor State 191
9-2B Source Multiplication Method Involving Two Reactor States 194
9-2C Null Reactivity Method 199

9-3 Basic Dynamic Reactivity Measurements 200
9-3A Survey 200
9-3B Asymptotic Period Method 201
9-3C Rod-Drop Method for a Critical Reactor 202
9-3D Subcriticality Measurements by the Rod-Drop Experiment 202
9-3E Source- and Rod-Jerk Methods 204
9-3F The Pile Oscillator Method 205
9-3G Pulsed Source Method 207
9-3H Theoretically Consistent Flux Shape Corrections 208
9-4 Inverse Kinetics 212
9-4A Inverse Point Kinetics 212
9-4B Inverse Kinetics for Reactivity Coefficients 214
9-4C Inverse Spatial Kinetics 217
Homework Problems 223
Review Questions 224
References 225

Ten: DYNAMICS WITH PROMPT REACTIVITY FEEDBACK

10-1 The Prompt Feedback Reactivity 228
10-1A The Fuel Temperature Rise 228
10-1B Prompt Feedback 237
10-2 Transients in the Subprompt-Critical or Subcritical Reactivity Domain 240
10-2A The Transient at Small Times 241
10-2B The Asymptotic Transients 246
10-3 Superprompt-Critical Excursion Following a Step Reactivity Insertion 250
10-3A Investigation of the Differential Equation 250
10-3B Investigation of the First Integral 254
10-3C The Flux Transient During a Superprompt-Critical Excursion 256
10-3D The Post-Burst Flux Transient 260
10-4 Superprompt-Critical Transients Induced by Reactivity Ramps 263
10-4A Investigation of the Differential Equation 263
10-4B Investigation of the First Integral 267
10-4C Discussion of the Flux Transient 271
Homework Problems 277
Review Questions 278
References 280

Eleven: SPACE-ENERGY DEPENDENT DYNAMICS

11-1 Introduction 282
11-2 General Discussion of the Dynamics Problem 284

11-3 Survey of Space-Energy Dependent Dynamics Approaches 288
11-3A Finite Difference Methods 288
11-3B The Point Reactor Model 290
11-3C The Modal Approach 291
11-3D The Nodal Approach 292
11-3E Flux Factorization Approaches 294
11-4 Quasistatic and Related Methods 299
11-4A Physical Interpretation of the Quasistatic and Adiabatic Assumptions 299
11-4B Factorization and Quasistatic Methods 304
11-4C Comparison of Kinetics and Dynamics Results 309
11-5 Dynamic Reactivity Coefficients 316
Review Questions 321
References 322

Appendix A: Reactivity Effects of Fission Products 326
Appendix B: Operators in Reactor Applications 336
Appendix C: Mathematical Formulas 349
Appendix D: The δ Function 352
