<i>Notation</i>	xix
<i>Preface</i>	xxv
1. Introduction	1
1.1 Introduction	1
1.2 What is a Light Water Reactor?	1
1.3 Fuel Rods and Fuel Assemblies	5
1.4 Fuel Rod Stabilization—Spacer Grids	9
1.5 Neutron-Absorber Devices	10
1.5.1 PWR control rods	10
1.5.2 BWR control blades	11
1.6 Coolant: H ₂ O	11
1.7 Water Reactors	12
1.7.1 PWR	12
1.7.2 BWR	14
1.8 Reactor Pressure Vessel Internals and Ex-Core Materials	16
1.9 Capacity Factor	18
1.10 Current Challenges	19
1.11 Layout of the Book	21
References	22
2. Chemical Thermodynamics	23
2.1 Applications of Thermodynamics to Light Water Reactor Materials	23
2.2 Thermodynamics	24
2.2.1 Basic properties	24
2.2.2 Heat and work	26
2.2.3 Thermodynamics laws	26

2.3	Equations of State.....	28
2.3.1	Gases	28
2.3.2	Condensed phases.....	29
2.4	Criteria of Thermodynamic Equilibrium	30
2.5	Single-Component Phase Equilibria.....	31
2.5.1	Liquid-vapor equilibria	31
2.5.2	Solid-liquid-vapor equilibria.....	32
2.6	The Phase Rule	35
2.7	Solution Thermodynamics.....	36
2.7.1	Partial molar properties	37
2.7.2	The chemical potential	37
2.7.3	The Gibbs-Duhem relation.....	38
2.7.4	Standard-state Gibbs energy.....	38
2.7.5	Activity and activity coefficient.....	40
2.7.6	Excess properties	41
2.7.7	Regular solutions.....	42
2.7.8	Mixtures of ideal gases	43
2.8	Two-Phase Equilibria	45
2.8.1	Raoult's and Henry's laws	46
2.8.2	Binary phase diagrams.....	46
2.9	Chemical Equilibrium	51
2.9.1	Law of mass action.....	52
2.9.2	Standard Gibbs energy of reaction.....	53
2.9.3	Stability diagrams.....	55
2.9.4	Ellingham diagrams.....	57
2.10	Aqueous Electrochemistry and Ionic Reactions	60
2.10.1	Faraday constant	61
2.10.2	The electric potential	62
2.10.3	The standard electrode potential	64
2.10.4	The Nernst equation	68
2.10.5	Ionic equilibria	70
2.10.6	Solubility product.....	71
2.10.7	Electrolysis of water	72
2.11	Computational Thermochemistry	74
2.11.1	Gibbs energy minimization	75
2.11.2	Compound-energy formalism	79
	References.....	86
	Problems	86

3. Crystallography.....	87
3.1 Introduction.....	87
3.2 Crystal Lattice and Crystal Structure	88
3.2.1 The unit cell	89
3.2.2 Basis.....	90
3.2.3 Crystal symmetry.....	91
3.3 Basic Lattice Types.....	93
3.3.1 Cubic lattices.....	93
3.3.2 Tetragonal and orthorhombic lattices.....	94
3.3.3 Hexagonal lattice	95
3.3.4 Some properties of common metals	96
3.4 Close-Packed Structures	97
3.5 The Real Crystal Structures	99
3.6 Miller Indices.....	101
3.6.1 Planes in a crystal structure	101
3.6.2 Directions in a crystal structure	103
3.6.3 Distances and angles between planes.....	103
3.6.4 Crystal-structure nomenclature.....	104
3.7 Ionic Solids.....	104
3.7.1 The NaCl (sodium chloride) and CsCl (cesium chloride) structures.....	105
3.7.2 The fluorite structure.....	106
3.7.3 The corundum structure.....	107
3.7.4 Zirconia	108
3.7.5 Oxide structures with two cations.....	108
3.8 Experimental Determination of Crystal Structure	109
3.8.1 X-ray diffraction.....	110
3.8.2 Electron diffraction.....	112
References.....	114
Problems	115
4. Point Defects	119
4.1 Classification of Point Defects	119
4.2 Equilibrium Concentrations of Point Defects in Elemental Crystals.....	120
4.2.1 Vacancy formation.....	124
4.2.2 Self-interstitials.....	125

4.2.3	Point-defect formation as a chemical reaction.....	125
4.2.4	Ordered compounds.....	126
4.3	Point Defects in Ionic Crystals	126
4.3.1	Types of point defects.....	127
4.3.2	Kroger-Vink notation.....	128
4.3.3	Site fractions	129
4.3.4	Site-filling, electrical neutrality, and equilibrium.....	130
4.3.5	Anion-Frenkel defects	131
4.3.6	Schottky defects.....	131
4.3.7	Gas-phase/defect equilibrium	132
	References.....	133
	Problems	133
5.	Diffusion in Solids	137
5.1	General Features of Diffusion	137
5.1.1	Diffusion in nuclear processes	138
5.1.2	Types of diffusion coefficients.....	138
5.2	Macroscopic Description of Diffusion.....	140
5.2.1	Species conservation.....	140
5.2.2	Fick's laws of diffusion.....	140
5.3	Useful Analytical Solutions	141
5.3.1	Surface-source and diffusion-couple methods....	142
5.3.2	Instantaneous-source method.....	145
5.3.3	Diffusion in finite geometries	145
5.3.4	Fission-gas release in postirradiation annealing	147
5.4	Atomic Mechanisms of Diffusion in Solids	148
5.4.1	Impurity motion between equilibrium sites	150
5.4.2	The Einstein equation.....	153
5.4.3	The vacancy mechanism	155
5.4.4	General diffusion formula	157
5.5	Diffusion in Ionic Crystals	157
5.6	Diffusivity Measurement Methods.....	160
5.6.1	Surface-tracer method.....	160
5.6.2	Diffusion-couple (Boltzmann-Matano) method.....	162
5.7	Diffusion in a Thermal Gradient (Soret Effect)	165
	Appendix A: Darken's Equation.....	166

Appendix B: Similarity Transformation Solution to Equations (5.8) to (5.12).....	168
Appendix C: Laplace Transform Solution to Equations (5.20) to (5.22)	169
References.....	171
Problems.....	171
6. Elasticity.....	175
6.1. Introduction.....	175
6.1.1 Stresses and strains	176
6.1.2 Notation for stresses	177
6.1.3 Displacements and strains	178
6.2 Equilibrium Conditions.....	180
6.3 Stress-Strain Relations.....	181
6.3.1 Elastic constants	181
6.3.2 Young's modulus	182
6.3.3 Poisson's ratio.....	184
6.3.4 Complete stress-strain relations	185
6.3.5 Shear modulus and bulk modulus.....	186
6.4 Elastic Energy Density	188
6.5 Membrane Stresses in Cylinders and Spheres	189
6.5.1 Thin-wall cylinders and spheres	190
6.5.2 Thick-wall cylinders.....	192
6.5.3 Spherical shapes	195
6.6 Thermal Stresses.....	196
6.6.1 Axisymmetric cylindrical geometry.....	197
6.6.2 Fuel-pellet cracking due to thermal stresses.....	200
6.6.3 Pellet expansion.....	202
6.6.4 Thermal stress parameter.....	203
References.....	204
Problems.....	204
7. Dislocations.....	207
7.1 The Onset of Permanent Deformation.....	207
7.2 Dislocations.....	208
7.2.1 The edge dislocation	208
7.2.2 The screw dislocation	209
7.2.3 The Burgers vector	210

7.3	Dislocations in Real Crystals	212
7.3.1	Slip systems	212
7.3.2	Compact notation for the Burgers vector	217
7.3.3	Mechanism of dislocation movement	218
7.3.4	Climb and cross-slip	220
7.4	Dislocation Density	222
7.5	Stress Fields Around Dislocations	224
7.5.1	Screw dislocation	225
7.5.2	Edge dislocation	226
7.6	Dislocation Self-Energy	226
7.7	Stresses to Initiate Dislocation Movement	228
7.8	Forces Exerted on Dislocations by Applied Stresses.....	229
7.8.1	Slip force on an edge dislocation	229
7.8.2	Climb of an edge dislocation	229
7.8.3	Slip of a screw dislocation	230
7.8.4	Climb of a screw dislocation	230
7.9	Interaction Forces Between Dislocations	230
7.9.1	Parallel screw dislocations	231
7.9.2	Parallel edge dislocations	232
7.9.3	Other combinations.....	233
7.10	Equilibrium Dislocations	234
7.10.1	Parallel screw dislocations	234
7.10.2	Bowed edge dislocation.....	235
7.10.3	Dislocation loop	235
7.11	Dislocation Multiplication	238
7.11.1	Why a dislocation multiplication mechanism is needed	238
7.11.2	The Frank-Read source	240
7.12	Impediments to Dislocation Motion.....	241
7.12.1	Long-range friction hardening.....	242
7.12.2	Dislocation climb	243
7.12.3	Jogs	246
7.12.4	Obstacles.....	250
7.12.5	Locking and unlocking	252
7.12.6	Summary	255
	Appendix: Stress Notation in Cartesian and Cylindrical Coordinates	257

References.....	257
Problems.....	258
8. Grains and Grain Boundaries.....	261
8.1 Grains in Solids.....	261
8.1.1 Fabrication of polycrystalline solids.....	261
8.1.2 Microscopic structure of grain boundaries.....	263
8.1.3 Simplified representation of a grain.....	266
8.2 Grain Size Distribution and Grain Growth.....	271
8.2.1 Hillert's model.....	272
8.2.2 Grain size distribution.....	274
8.2.3 Average grain size.....	275
8.2.4 Grain growth.....	276
8.3 Grain Boundary Mobility.....	277
8.4 Grain Boundary Diffusion.....	279
8.4.1 Measurement of the grain-boundary diffusivity.....	280
8.4.2 Effect of grain boundary diffusion on fission product release.....	282
8.5 Sintering.....	286
References.....	290
Problems.....	290
9. Thermal Performance.....	293
9.1 Introduction.....	293
9.2 Fission Heat Generation.....	293
9.2.1 Energy release from fission.....	294
9.2.2 Fuel burnup.....	295
9.3 Fission Heat Removal.....	295
9.3.1 Heat conduction in the fuel.....	296
9.3.2 Heat transfer resistances beyond the fuel.....	298
9.3.3 Gap closure on initial heatup.....	302
9.4 Axial Temperature Profile.....	303
9.5 Thermal Conductivity.....	306
9.5.1 Thermal conductivity in porous oxide.....	307
9.5.2 Thermal conductivity variation with temperature.....	309
9.6 Thermal Margins and Operating Limits.....	311

9.6.1	Critical heat flux.....	311
9.6.2	Pellet-cladding mechanical interaction.....	314
9.7	Limits for Accident Conditions	314
9.7.1	Loss-of-coolant accident (LOCA)	315
9.7.2	Reactivity-initiated accident (RIA)	315
9.7.3	Stored energy	316
	References.....	317
	Problems.....	318
10.	Phase Transformations in Solids	321
10.1	Introduction.....	321
10.2	Thermodynamics of Phase Changes	322
10.2.1	Driving force for phase transformations	322
10.2.2	Phase diagrams and Gibbs energy curves.....	324
10.2.3	Examples of important phase diagrams	329
10.3	Nucleation of a Second Phase	335
10.3.1	Homogeneous nucleation	335
10.3.2	Heterogeneous nucleation	339
10.4	Phase-Transformation Kinetics.....	342
10.4.1	Homogeneous nucleation and growth in a single-component system.....	343
10.4.2	Interfacial reactions in two-component systems.....	345
10.4.3	Diffusion-controlled growth in a binary solid-state system	345
10.4.4	Transformation-time-temperature (TTT) diagrams	348
10.4.5	Precipitate loss of coherency	352
10.4.6	Precipitate coarsening–Ostwald ripening	352
10.5	Diffusionless Phase Transformations: Martensitic Transformation.....	354
10.6	Order-Disorder Transformations	355
10.7	Amorphization	358
	References.....	360
	Problems	361
11.	Mechanical Behavior of Materials	363
11.1	Introduction.....	363
11.2	Mechanical Testing	363

11.2.1	Uniaxial tensile test.....	364
11.2.2	Biaxial testing: tube burst	367
11.2.3	The von Mises equivalent stress.....	368
11.2.4	Hardness testing.....	371
11.2.5	Impact testing.....	371
11.3	Microstructural Aspects of Deformation.....	373
11.3.1	Critical resolved shear stress and the yield stress.....	373
11.3.2	Strengthening mechanisms.....	375
11.4	Creep Deformation.....	376
11.4.1	Phenomenological description of creep	377
11.4.2	Creep lifetime	377
11.4.3	Larson-Miller plots	378
11.4.4	Creep mechanisms.....	378
11.4.5	Deformation mechanism maps.....	381
11.5	Material Fracture.....	381
11.5.1	Overload failure by diffuse necking: the Considère criterion	383
11.5.2	Ductile fracture	384
11.5.3	Fracture due to crack growth.....	384
11.5.4	Subcritical crack growth.....	387
	References.....	387
	Problems.....	388
12.	Radiation Damage.....	391
12.1	Introduction.....	391
12.2	Particle-Solid Interactions	392
12.2.1	Cross section.....	393
12.3	Primary Knock-On Atom Energy Loss Mechanisms....	394
12.3.1	Binary elastic collision dynamics.....	395
12.3.2	The limit between nuclear and electronic stopping.....	397
12.3.3	Electronic stopping: energy transfer rate	398
12.3.4	Nuclear stopping	399
12.3.5	Ion-atom scattering; general binary collision dynamics.....	400
12.4	The Displacement Process	405
12.4.1	Threshold displacement energy	405

12.4.2	Displacement cascade and the final damage structure.....	407
12.5	Displacements per PKA	410
12.5.1	The Kinchin-Pease (K-P) model.....	410
12.5.2	Lindhard-Scharff-Schiott (LSS) energy partition model.....	411
12.5.3	The Norgett-Robinson-Torrens (NRT) Model ..	413
12.6	Displacements per Atom Caused by Neutron Irradiation.....	414
12.6.1	Displacements calculated with the NRT model	418
12.7	Other Measures of Radiation Damage	419
12.8	Other Displacement Mechanisms	420
12.8.1	Gamma displacement damage	420
12.8.2	Thermal neutron reactions	424
12.8.3	Inelastic scattering	424
12.9	Charged-Particle Irradiation	425
12.9.1	Electron irradiation	426
12.9.2	Ion irradiation	426
12.9.3	TRIM and SRIM codes	428
	References.....	431
	Problems.....	432
13.	Microstructure Evolution Under Irradiation	439
13.1	Introduction.....	439
13.2	Microstructure Evolution Under Irradiation.....	440
13.3	Rate Theory of Defect Evolution Under Irradiation	442
13.3.1	Basic rate theory assumption	443
13.4	Reaction Rate Between Point Defects.....	444
13.4.1	Divacancy formation	445
13.4.2	Point-defect recombination	447
13.5	Point-Defect Reactions with Extended Sinks	449
13.5.1	Sink strengths: isolated sinks.....	450
13.5.2	Sink strengths for dislocations and voids: accurate calculation	457
13.5.3	Grain boundary sink strength.....	462
13.6	Point-Defect Balances.....	464
13.6.1	Point-defect balance equations	465

13.6.2	Steady-state solutions of point-defect balances.....	466
13.6.3	Transient solutions: kinetics of defect accumulation	469
13.7	Numerical and Approximate Solutions	474
13.7.1	Nondimensionalization and numerical solution	474
13.7.2	Approximate solutions for limiting cases.....	475
13.8	Rate Theory Limitations.....	480
	References.....	481
	Problems	481
14.	Fundamentals of Aqueous Corrosion	485
14.1	Introduction.....	485
14.2	Thermodynamics of Corrosion.....	487
14.2.1	The overall reaction	487
14.2.2	Pourbaix diagrams	488
14.3	The Electrode Potential at Equilibrium	491
14.4	Corrosion Kinetics.....	493
14.4.1	The Butler-Volmer equation.....	493
14.4.2	Tafel equations.....	495
14.4.3	The exchange current density i_0	496
14.4.4	The symmetry parameter.....	496
14.4.5	Analyzing corrosion reactions quantitatively	497
14.4.6	Evans plots	499
14.4.7	Evans plots for multiple cathodic reactions	499
14.4.8	Evans plots for multiple anodic reactions	502
14.4.9	Concentration polarization	503
14.4.10	Tafel diagrams with passivation.....	505
14.5	Scales on Structural Metals.....	507
14.5.1	Corrosion-product properties.....	507
14.5.2	Magnetite solubility in water.....	510
14.5.3	Oxide scale on a divalent metal.....	513
14.5.4	Flux through the oxide scale	516
14.5.5	Position-independent electric field	517
14.5.6	Space charge in the oxide scale.....	518
14.5.7	Growth of passive scales	523

14.6	Pitting.....	524
14.6.1	Generalities	525
14.7	Crevice Corrosion.....	525
14.7.1	Mechanism.....	526
14.7.2	Electrochemistry in the crevice	528
14.7.3	Computational results	534
14.7.4	Improvements of the model	535
	References.....	536
	Problems	536
15.	Computational Modeling of Nuclear Fuels by Brian Wirth.....	539
15.1	Introduction.....	539
15.2	Brief Description of Modeling Techniques.....	543
15.2.1	Ab initio electronic structure calculations.....	543
15.2.2	Molecular dynamics (MD)	546
15.2.3	Accelerated molecular dynamics	548
15.2.4	Kinetic Monte Carlo.....	550
15.2.5	Reaction rate theory and spatially dependent cluster dynamics model.....	551
15.2.6	Phase field modeling.....	554
15.2.7	Finite element-based fuel performance models.....	555
15.2.8	Summary	558
15.3	Irradiation Behavior of UO_2	559
15.3.1	Electronic structure calculations of fission product and gas behavior in UO_2	560
15.3.2	Displacement cascade simulations in UO_2	566
15.3.3	Thermal conductivity of UO_2	568
15.4	Mesoscale Simulations.....	572
15.4.1	Rate-theory modeling of fission gas.....	572
15.5	Fuel Performance Simulations	576
15.5.1	Modeling uncertainty of fission gas release	576
15.5.2	Fuel performance simulations of pellet-cladding interaction.....	579
15.6	Summary	587
	References.....	588
