<i>Notation</i>	xxi
<i>Preface</i>	xxvii
16. Oxide Fuels	637
16.1 LWR Fuels: $^{235}\text{UO}_2$ and $^{239}\text{PuO}_2$	637
16.1.1 Fabrication of oxide fuel pellets.....	639
16.1.2 Mixed-oxide fuel.....	644
16.1.3 Varieties of oxide fuel pellets.....	645
16.2 Chemistry of Nuclear Oxides.....	646
16.2.1 Experimental methods.....	647
16.2.2 Nanochemistry.....	648
16.2.3 Macrochemistry.....	650
16.3 Microchemistry of Nuclear Oxides.....	653
16.3.1 Characteristics of point defects in nuclear oxides.....	654
16.3.2 Uranium-oxygen phase diagram.....	654
16.3.3 Measures of concentrations in oxides.....	655
16.3.4 Equations for point defects in $\text{UO}_{2\pm x}$	657
16.3.5 Structural defect equilibria.....	658
16.3.6 Electronic disorder: U^{4+} disproportionation.....	660
16.3.7 Gas-phase/defect equilibrium in $\text{UO}_{2\pm x}$	660
16.4 Mixed Oxides.....	664
16.4.1 Valence-control rule.....	664
16.4.2 Oxygen partial pressure of $(\text{U}_{1-x}\text{Q}_x)\text{O}_{2\pm z}$	665
16.5 Point-Defect Clustering in UO_{2+x}	668
16.6 Specific Heat.....	673
16.7 Thermal Conductivity.....	675
16.7.1 Measurement by the laser-flash method.....	675
16.7.2 Pure $\text{UO}_{2.00}$	677
16.7.3 Electronic component of the thermal conductivity in $\text{UO}_{2.00}$	679

16.7.4	UO _{2.00} with cation impurities.....	681
16.7.5	Ex-reactor thermal conductivity of irradiated UO ₂	682
16.7.6	UO ₂ thermal conductivity during irradiation.....	686
16.8	Oxygen Diffusion in UO ₂	687
16.8.1	Oxygen self-diffusion in stoichiometric UO ₂	687
16.8.2	Oxygen self-diffusion in hyperstoichiometric UO _{2+x}	690
16.8.3	Chemical diffusion of oxygen in hyperstoichiometric UO _{2+x}	691
16.9	Uranium Diffusion in UO ₂	694
16.9.1	Uranium self-diffusion in stoichiometric UO ₂	694
16.9.2	Uranium self-diffusion in hyperstoichiometric UO _{2+x}	695
16.9.3	Uranium chemical diffusion in hyperstoichiometric UO _{2+x}	697
16.10	Summary of Diffusion in UO ₂	698
16.11	Interdiffusion in Mixed Oxides.....	699
16.12	Mechanical Properties of Uranium Dioxide.....	702
16.12.1	Elastic modulus.....	703
16.12.2	Fracture properties.....	704
16.12.3	Creep.....	704
16.13	Property Summaries.....	707
	References.....	707
	Problems.....	709
17.	Zirconium Alloys.....	711
17.1	Introduction and Historical Background.....	711
17.1.1	Historical background.....	711
17.2	Motivation for Use of Zr Alloys.....	713
17.3	Physical Metallurgy.....	713
17.3.1	Allotropic phase change.....	715
17.3.2	Alloys and alloying elements.....	716
17.3.3	Diffusion of alloying elements.....	717

17.4	Commercial Zirconium Alloys.....	718
17.4.1	Elements with significant solubilities: Sn, Nb, O, and H.....	720
17.4.2	Low-solubility elements: Fe, Cr, and Ni	721
17.5	Fabrication of Tubing and Sheet.....	724
17.6	Dislocation Structure and Deformation Mechanisms	727
17.7	Crystallographic Texture and Physical Properties.....	728
17.7.1	Texture formation in zirconium alloys during deformation	729
17.7.2	Representation and measurement of texture	730
17.7.3	Property anisotropy and texture parameters	733
17.7.4	Kearns factors	734
17.8	Fuel Elements and Fuel Assemblies	736
17.8.1	Cladding geometry	736
17.8.2	Fuel-cladding gap.....	737
17.9	Microstructural Changes of Zr Alloys Under Irradiation	740
17.9.1	Point defects in Zr alloys	740
17.9.2	Irradiation effects in the Zr matrix	741
17.9.3	Dislocation structure	741
	References.....	743
	Problems.....	744
18.	Fuel Assembly Effects: Fuel/Cladding Interaction	747
	Introduction	747
18.1	Fretting	748
18.2	Mechanical Interactions Between Pellet and Cladding	748
18.3	Corrosion in the Primary Circuit.....	750
18.3.1	Materials in the primary circuit.....	751
18.3.2	Corrosion products on fuel rods and primary circuit components.....	752
18.3.3	Control of pH in PWR coolant	755
18.4	CRUD Deposition.....	758
18.5	Wick Boiling in CRUD	759
18.6	Solute Penetration in CRUD on PWR Fuel Rods.....	762

18.7	Axial Offset Anomaly.....	767
18.8	CRUD-Induced Localized Corrosion.....	769
18.9	The Rim Region.....	770
18.9.1	Neutron flux.....	770
18.9.2	²³⁹ Pu production.....	772
18.9.3	Burnup in the rim region	773
18.9.4	Effect of the rim region on the fuel temperature.....	775
18.10	The High-Burnup Structure	780
18.10.1	Formation of small grains.....	780
18.10.2	Characteristics of the high-burnup structure ..	781
18.10.3	Fission-gas pressure in the rim bubbles of fully restructured fuel	783
18.11	Model of High-Burnup Structure Formation	784
18.11.1	Start of the HBS.....	784
18.11.2	HBS growth.....	785
18.11.3	Xenon measured with EMPA.....	787
18.11.4	Application of the model.....	789
18.12	Summary of the Rim Region and the High-Burnup Structure	793
	References.....	794
	Problems.....	795
19.	Void Swelling.....	799
19.1	Introduction.....	799
19.2	Equilibrium Cavities.....	801
19.2.1	Thermodynamic equilibrium	802
19.2.2	Mechanical equilibrium	803
19.2.3	Dynamic equilibrium	804
19.3	Equations of State of He and Xe.....	805
19.3.1	Van der Waals EOS.....	805
19.3.2	Interatomic potentials	806
19.3.3	Hard-sphere equation of state.....	807
19.3.4	Summary	810
19.4	Nucleation and Growth of Cavities	810
19.4.1	Rate-controlling step in cavity growth.....	811
19.4.2	Reaction step.....	812

19.4.3	Rate-controlling step: diffusion or reaction?	814
19.4.4	Diffusion coefficients	815
19.5	Void Nucleation and Growth: The Dislocation-Bias Model.....	816
19.5.1	Nucleation of voids	816
19.5.2	Constrained distribution.....	818
19.5.3	Nucleation rate	820
19.5.4	Simplified point-defect balances.....	821
19.5.5	Transition from nucleation to growth	822
19.5.6	Void growth	823
19.5.7	Void swelling.....	827
19.5.8	Summary	827
19.6	Motion of Cavities	828
19.6.1	Point-defect clusters.....	829
19.6.2	Vacancy clusters	832
19.6.3	Interstitial clusters.....	832
19.6.4	Crowdion clusters	834
19.6.5	Crowdion loop movement.....	834
19.6.6	Crowdion loop reaction rates.....	838
19.7	Void Lattices	839
19.7.1	Origin of void lattices.....	840
19.7.2	How voids react with crowdion loops	841
19.7.3	Voids as sinks for crowdion loops.....	842
19.7.4	Void size in a void lattice.....	845
19.8	Helium Effects: Critical Cavity Sizes.....	848
19.8.1	Configuration, diffusion, and reactions of helium in the matrix	849
19.8.2	Thermal detrapping of substitutional He	850
19.8.3	Trapping of helium interstitials by vacant lattice sites.....	851
19.8.4	SIA displacement of substitutional He	851
19.8.5	Dynamic equilibrium	852
19.8.6	Helium absorption by extended defects	853
19.8.7	Helium balance.....	854
19.8.8	Helium accretion in the cavities	854
19.8.9	Summary	857

Appendix A. Combinatorial Numbers: Shell	
Representation of the fcc Lattice.....	859
References.....	864
Problems.....	867
20. Solid Fission Product Behavior.....	871
20.1 Introduction.....	871
20.2 The Fission Process.....	871
20.2.1 Energy release by fission.....	871
20.2.2 Thermal spike.....	874
20.2.3 Fission-product yields.....	874
20.2.4 Fission rate.....	883
20.2.5 Burnup in UO_2 fuel.....	884
20.3 Solid Fission Products.....	886
20.3.1 Chemical behavior of fission products in the fuel.....	889
20.3.2 Electrical neutrality.....	890
20.3.3 Oxygen pressure.....	891
20.3.4 Chemical speciation of fission products with burnup.....	893
20.3.5 Oxygen point defects.....	895
20.4 Fuel Swelling.....	898
20.4.1 Fuel swelling due to solid fission products.....	900
20.5 Point Defects Due to Irradiation.....	902
20.5.1 Point-defect production by displacement damage.....	903
20.5.2 Vacancy re-resolution from pores.....	904
20.5.3 Point-defect diffusivities.....	906
20.5.4 Rate-theory point-defect balances.....	908
20.5.5 Steady-state solution of the point-defect balances.....	910
References.....	911
Problems.....	913

21. Fission Gas Release.....	917
Introduction.....	917
21.1 Fission Gases.....	917
21.1.1 Production rate.....	918
21.1.2 Fission gas diffusion in UO_2	918
21.1.3 Absorption by sinks.....	925
21.1.4 Nucleation of fission gas bubbles.....	926
21.1.5 Fission gas re-resolution from bubbles	927
21.1.6 Cluster distribution function	931
21.1.7 Size and concentration of intragranular bubbles.....	934
21.2 Intragranular Fission Gas Release	939
21.2.1 Effective fission gas diffusion coefficient	939
21.2.2 The Booth equation [18].....	940
21.2.3 Modification of the Booth equation for re-resolution.....	945
21.2.4 An improved modification of the Booth equation for re-resolution	947
21.2.5 Comparison of modified Booth models.....	947
21.3 Fission Gas on the Grain Boundary.....	950
21.3.1 Geometry of grains and intergranular bubbles.....	950
21.3.2 Equation of state of gas in lenticular bubbles.....	952
21.3.3 Saturation of the grain boundary with fission gas	954
21.3.4 Intergranular bubble growth	955
21.3.5 Size and spacing of linear bubbles.....	962
21.3.6 Release of fission gas from the grain boundary to the fuel rod.....	970
21.4 The Rim Region.....	975
21.4.1 Neutron flux.....	975
21.4.2 ^{239}Pu production.....	976
21.4.3 Burnup in the rim region	978
21.4.4 Effect of the rim region on the fuel temperature.....	980
References.....	986
Problems.....	987

22. Waterside Corrosion of Zirconium Alloy Cladding	991
22.1 Introduction.....	991
22.2 General Features of Corrosion of Zirconium Alloys	992
22.2.1 Uniform corrosion: pre-transition behavior	993
22.2.2 Uniform corrosion: the oxide transition	995
22.3 Oxide Structure and Suboxides	997
22.4 Corrosion Kinetics in the Protective Oxide:	
Parabolic Law.....	1001
22.4.1 Corrosion mechanism	1003
22.4.2 Parabolic scaling law.....	1005
22.5 Deviation from Parabolic Scaling.....	1007
22.5.1 Lateral cracking in the oxide scale	1007
22.5.2 Oxide electron conductivity.....	1009
22.6 The Oxide Transition and Post-Transition Kinetics	1009
22.6.1 Linear kinetics	1011
22.6.2 Unstable oxide growth: breakaway corrosion.....	1012
22.7 In-Reactor Corrosion	1013
22.7.1 Uniform corrosion under heat flux.....	1014
22.7.2 Water chemistry	1018
22.7.3 Electrochemical potential in the primary circuit.....	1025
22.7.4 CRUD deposition.....	1028
22.8 Localized Corrosion: Nodular Corrosion and Shadow Corrosion	1029
22.8.1 Nodular corrosion.....	1029
22.8.2 CRUD-induced localized corrosion.....	1030
22.8.3 Shadow corrosion.....	1031
22.9 High-Temperature Zirconium (Zircaloy) Oxidation.....	1032
22.9.1 Simple parabolic scaling.....	1033
22.9.2 Growth of the α -Zr(O) and ZrO ₂ layers	1034
22.10 Summary	1042
References.....	1042
Problems	1045

23. Hydrogen Behavior in Cladding.....	1047
23.1 Introduction.....	1047
23.2 Hydrogen Pickup	1050
23.2.1 Hydride morphology and crystal structure	1052
23.3 Hydrogen Transport	1054
23.4 Hydrogen Solubility in Precipitation and Dissolution	1056
23.5 Hydride Precipitation Kinetics.....	1058
23.6 Hydride Precipitates	1060
23.6.1 Hydride morphology and crystal structure	1060
23.7 Hydride Precipitation Under Stress	1064
23.7.1 Hydride reorientation.....	1064
23.7.2 Delayed hydride cracking	1066
23.7.3 Hydride connectivity	1067
23.8 Anisotropic Hydride Distribution.....	1069
23.8.1 Radial temperature gradient.....	1069
23.8.2 Formation of a hydride rim.....	1070
23.8.3 Azimuthal gradients	1072
23.8.4 Axial gradients.....	1074
23.9 Effect of Hydrides on Cladding Ductility	1075
23.10 Hydrogen in Solid Solution and Its Influence on the Microstructure	1079
23.11 Summary	1080
References	1080
Problems.....	1084
24. Phase Transformations Under Irradiation	1087
24.1 Introduction and Historical Background.....	1087
24.2 General Discussion	1088
24.3 Irradiation-Altered Kinetics: Effect on Atomic Transport.....	1089
24.4 Phase Transformations at Constant Chemical Composition	1093
24.4.1 Change in crystal structure	1093
24.4.2 Change in chemical order induced by irradiation.....	1094
24.4.3 Irradiation-induced amorphization	1100

24.5	Phase Transformations with Changes in Composition	1110
24.5.1	Irradiation-induced precipitate dissolution	1111
24.5.2	Irradiation-induced segregation and precipitation	1116
24.6	A Complex Example: Irradiation-Induced Changes in Second-Phase Precipitates in Zircaloy	1122
	References	1126
	Problems.....	1127
25.	Irradiation-Assisted Stress-Corrosion Cracking.....	1131
25.1	Introduction.....	1131
25.2	The Reactor Internals	1132
25.3	Stress-Corrosion Cracking	1133
25.4	The Stress-Corrosion Cracking Reaction in Steel.....	1135
25.4.1	The slip-dissolution model	1136
25.4.2	Corrosion current at the crack tip.....	1139
25.4.3	Crack propagation velocity.....	1141
25.5	Influence of Irradiation on Stress-Corrosion Cracking	1143
25.5.1	Material sensitization in heat-affected zones and under irradiation	1143
25.5.2	Localized deformation under irradiation.....	1144
25.5.3	Effect of environment/radiolysis.....	1145
25.6	Iodine-Induced Stress-Corrosion Cracking in Zircaloy	1152
25.7	Leak-Before-Break Analysis	1154
25.8	Prevention and Mitigation of Stress-Corrosion Cracking	1156
	References	1157
	Problems.....	1158
26.	Irradiation-Induced Mechanical Property Changes: Hardening and Embrittlement	1161
26.1	Introduction.....	1161

26.2	Changes in the Stress-Strain Curve After Irradiation	1162
26.2.1	Face-centered cubic structure	1162
26.2.2	Body-centered cubic structure	1165
26.2.3	Hexagonal close-packed structure	1167
26.3	Hardening by Irradiation-Induced Obstacles.....	1168
26.3.1	Increase in defect density with fluence.....	1170
26.4	Embrittlement by Deformation Localization.....	1173
26.5	Embrittlement by Formation of Helium Bubbles	1174
26.6	Assessment of Radiation Embrittlement: Impact Testing	1175
26.6.1	Pressurized thermal shock.....	1176
26.6.2	The Charpy test and the nil-ductility temperature	1179
26.7	Master Curve Approach.....	1182
	References.....	1183
	Problems	1184
27.	Irradiation Creep and Growth.....	1189
27.1	Introduction.....	1189
27.2	Irradiation Growth	1192
27.2.1	Irradiation growth in metallic uranium	1192
27.2.2	Irradiation growth in zirconium alloys	1195
27.3	Creep.....	1203
27.3.1	Thermal creep.....	1204
27.3.2	Irradiation creep.....	1205
27.4	Summary	1214
	References.....	1214
	Problems	1216
28.	Design Basis Accidents: RIA and LOCA	1219
28.1	Introduction.....	1219
28.2	Design Basis Accidents.....	1220
28.3	The Reactivity-Initiated Accident	1221
28.3.1	Evolution of an RIA.....	1222
28.3.2	Pulse shape and width: the Nordheim-Fuchs model.....	1223

28.3.3	Fuel temperature during an RIA	1225
28.3.4	Cladding temperature rise due to an RIA.....	1228
28.3.5	Physical processes during an RIA.....	1230
28.3.6	Cladding stresses during an RIA	1232
28.3.7	RIA effects on fresh fuel.....	1234
28.3.8	RIA effects on high-burnup fuel.....	1235
28.4	The Loss-of-Coolant Accident (LOCA)	1239
28.5	Oxygen Embrittlement of Cladding	1239
28.5.1	Excess oxidation	1240
28.5.2	Heat release from oxidation	1241
28.5.3	Steam starvation due to gas-phase mass transfer.....	1246
28.5.4	Steam starvation due to slow surface reaction.....	1252
28.6	Development of a LOCA.....	1256
28.6.1	Initiation	1256
28.6.2	Progress	1257
28.6.3	Cooldown from operating temperature (Phase A).....	1260
28.6.4	Cooldown prior to fuel uncover (Phase B)	1265
28.6.5	Fuel-rod uncover (Phase C).....	1270
28.6.6	Reactant starvation (Phase D)	1278
28.6.7	Steam availability in a LOCA.....	1289
28.7	Ballooning and Rupture of the Cladding.....	1291
28.7.1	Measures of ballooning/rupture	1293
28.7.2	Complications in operating fuel elements.....	1296
28.7.3	Creep model of ballooning.....	1297
	References.....	1300
	Problems.....	1302
29.	Severe Accidents	1303
29.1	Introduction.....	1303
29.2	Fuel-Cladding Reaction	1303
29.2.1	Phase relations in the U-Zr-O system	1304
29.2.2	Navigating a ternary phase diagram	1309
29.2.3	Reaction of UO_2 with solid Zr.....	1311

29.3	Severe Accidents.....	1318
29.3.1	Core damage.....	1319
29.3.2	Damage to nonfuel core components.....	1321
29.3.3	Relocation of rubble/corium	1323
29.3.4	Steam explosion.....	1324
29.3.5	Molten core–concrete interaction (MCCI).....	1326
29.3.6	Fission-product release.....	1332
29.3.7	In-vessel fission-product release	1336
29.3.8	Fuel vaporization from a corium pool during a MCCI.....	1343
29.3.9	Release of fission products to the containment atmosphere by bubbling of the decomposition gases through the corium pool	1352
29.4	Aerosols	1356
29.4.1	Collisions by Brownian diffusion	1357
29.4.2	Thermophoresis.....	1358
29.4.3	Removal of aerosols and steam in the containment building	1362
29.4.4	Aerosol coagulation	1365
29.4.5	Summary of aerosols	1368
29.5	Summary	1370
	Appendix A. Solution of the MCCI Analysis	1371
	Variables	1371
	Appendix B. The Thermal-Radiation Term in MCCI	1373
	References.....	1374
	Problems.....	1375
30.	Fuel Performance Codes by Joseph Y. R. Rashid	1379
30.1	Introduction.....	1379
30.2	Fuel-Rod Material Constituents and Phenomena Simulated in Fuel Performance Codes	1381
30.2.1	Material constituents	1381
30.2.2	Phenomena simulated in fuel performance codes.....	1383
30.3	Historical Perspective	1384
30.3.1	FPC development before 1980.....	1386
30.3.2	FPC development after 1980.....	1387
30.3.3	Current state of fuel performance codes.....	1388

30.4	Impact of Fuel Performance Codes on Cladding Material Development	1390
30.5	Fuel Performance Code as a Single-Rod Analog of the Reactor Core	1393
30.6	Material and Behavior Models in a Fuel Performance Code	1394
30.6.1	Constitutive properties models – Group (i)	1397
30.6.2	Behavioral models – Group (ii)	1401
30.7	Geometric and Numerical Representations in FPCs	1403
30.7.1	Spatial representations and meshing schemes – 1½D codes	1404
30.7.2	Spatial representations and meshing schemes – 2D and 3D codes.....	1405
30.8	Illustrative Results for PCI and MPS	1405
30.9	Fuel Performance Codes: Input and Output Conditions.....	1406
30.10	Temperature and Stress Calculations in Fuel Performance Codes	1410
30.10.1	Temperature calculations	1410
30.10.2	Stress calculations.....	1417
30.11	Summary	1421
	References.....	1422
	Problems.....	1426
